

FAMILY STEM NIGHT

KNW 4/18/24

Family STEM Night

Families attended STEM night during which they completed different engineering challenges to earn tickets for different incentives. We had popcorn for snack and enjoyed all the creative building projects!

Centers included engineering/building challenges and literacy skills reading and following directions. We used magnetiles, Keva Contraption blocks, and lots of LEGOS to build bridges, create names, towers, vehicles, and lots of exciting structures. Students chose easy, medium and difficult challenges to complete and volunteers checked completed projects and gave tickets for each one completed.

Students then traded those tickets for candy and other incentives. The more difficult the challenge the more tickets they earned. The students loved working together, helped each other and had lots of fun.

STEM CHALLENGES!
