

GENERAL INTRODUCTION

YUP'IK SOUNDS AND SPELLING

The reader who is not familiar with the sounds of Yup'ik or with the Yup'ik writing system should refer to the section titled “Phonology and Orthography” near the end of this Introduction.

DICTIONARY FORMAT AND GENERAL CONTENT OF ENTRIES

Alphabetization

In this dictionary words¹ are alphabetized in the order familiar from English, with the two diacritics (discussed below) and the comma (discussed below) disregarded. Thus, **vv**, **ll**, **ss**, **gg**, **rr**, and **ng** are *not* considered single letters in alphabetization even though they represent single sounds. Furthermore, a form with a diacritic or comma is listed immediately after a form without a diacritic or comma in the same place. Thus **an'uk** ‘they₂ went outside’, would come immediately after **anuk** ‘dog harness’; **tan'geq** ‘darkness’, would come immediately after **tangeq** ‘crackling(s)’; and **ugasek** ‘arctic hare’, is listed as if it were spelled ***ugasek**.

Basic Format of Entries

A Yup'ik dictionary entry, in boldface type, is followed immediately by one or more non-bold English glosses (or translations) separated from each other by semicolons. Dividing the glosses from the rest of the entry, discussed further below, is the symbol “#”.

Most lexemes in Yup'ik are nouns or verbs. Nouns are given in the natural citation form, thus **angyaq** ‘boat’ (rather than, say, **angyaqa** ‘my boat’ or **angyamun** ‘to the boat’), but verbs—having no clear-cut natural citation form—are given in their abstract base or stem form with a hyphen, translated by the English infinitive, thus **nere-** ‘to eat’. (More on this topic below.)

Homonyms (words that only coincidentally sound, and therefore are spelled, alike) are listed separately and numbered with superscripts; thus **qanir**⁻¹ ‘to snow’, and **qanir**⁻² ‘to put siding on’.

Phonetic variants of a given word are listed together as long as they are so close that they do not differ in their first few letters. Thus, **qiuryaq** and **qiuryak**, both forms occurring in Yup'ik, are listed together as one entry for ‘aurora’, but another variant, **kiuryaq**, is listed in the **k** section as another entry. Each of the two entries refers to the other by having the other form toward the end entry with an equals sign; thus toward the end of the entry **qiuryaq**, **qiuryak** ‘aurora’ is “= kiuryaq”, and toward the end of the entry **kiuryaq** ‘aurora’ is “= qiuryaq”.

Bases That Can Be Both Nouns and Verbs

If a Yup'ik lexeme is both noun and verb, as is frequently the case, then noun and verb are given in a single entry, with the noun coming first. For example: **atkuk** ‘parka’ # *and* **atkug-** ‘to put on a parka’ #, the two followed

¹ In this discussion the term “word” applies to any lexical entry including nouns (completed words) and verb bases (which, strictly speaking, are not complete words).

by both nominal and verbal examples.

In a few cases the noun form is clearly secondary to the verb form, or vice versa; in those cases, noun forms and verb forms are given as separate entries. The secondary form is labeled a “direct nominalization” or “direct verbalization”.

Concerning Derived Forms and the Difference in Their Handling Between the 1984 and Present Editions

Derived words are given their own listings in this edition and are not indented subentries as in the 1984 edition. For example, **kipusvik** ‘store’ is no longer given as a subentry under **kipute-** ‘to buy’, but rather is listed at its own alphabetical place, which comes somewhat before the listing for **kipute-**. Derived words include those words that are entirely predictable in form and/or meaning, if the form differs markedly from that of the “parent” word (e.g., **acir-** ‘to name’ is a dictionary entry though it is predictably derived from **ateq** ‘name’, since **ac...** might not be seen as related to **at...**)², or if the meaning can be given in a single English term (e.g., **calissuun** ‘tool’ is a dictionary entry though its meaning (‘device for working’) and form are predictable from **cali-** ‘to work’, but then ‘tool’ is a common English word), or if the derived form as such is to be frequently encountered (e.g., **maqivik** ‘steambath’ is a dictionary entry though its meaning and form are predictable from **maqi-** ‘to steambathe’, since the derived word is so commonly encountered).

Concerning Entries for Words That Are Neither Nouns or Verbs (or Are Special Categories of These)

Following the glosses and the symbol “#” may be a brief grammatical label or explanation such as *particle*, *extended demonstrative adverb*, *positional base*, *selectional base*, or *used in quantifier/qualifier construction*. These are in accordance with, and explained, in *A Practical Grammar of the Central Alaskan Yup’ik Eskimo Language* (Jacobson 1995), hereafter referred to *Practical Grammar of . . . Yup’ik*. The most important grammatical division is between nouns and verb bases, and this will be clear as explained below.

Exemplification

After the gloss or glosses (followed by “#”) and the grammatical label (if any) for many dictionary entries, there are Yup’ik phrases or sentences with the word in question.

In the case of a verb, any examples coming before the symbol “/” illustrate *polarity* (see the section of this Introduction on the indication of verb polarity).

After any polarity indicators for verbs are other examples. Those written here, without capitals and periods, were composed for this dictionary.

Certain verb-elaborating derivational suffixes, such as those expressing intensive action, sudden action, repeated action, transitivity, and action for with or for something / someone, are not quite entirely predictable in one respect or another, and so examples showing their use are given early in a verb entry.

They may show suffixed forms of the word that are important and/or frequent or quite different in appearance

² However, many endings (inflectional suffixes) and postbases (derivational suffixes) having symantically “thin” meaning (e.g., negation, tense), as opposed to other postbases with more symantic heft, may also alter a “short” base to the point of making it hard to recognize. Forms with these endings are given only as examples under the word in question and not as separate entries. Thus, given only as examples, under the entry **at’e-** ‘to put on clothes’, are **all’uku** ‘putting it on’ (with an ending), **asngaitaa** ‘he won’t put it on’ (with a postbase), **aqaarluku** ‘after putting it’, and **apailgaku** ‘after he put it on’, as opposed to **asnguar-** ‘to try on’, and **ac’inqigte-** ‘to change clothes’, which are given as separate entries (though with its derivation from **at’e-** indicated).

(and sound) from the form without a suffix. Thus, examples at **apte-** ‘to ask’ may include **apluku** ‘asking him’, **apesgu** ‘ask him’, **apngaitaa** ‘he won’t ask him’, **apciqaa** ‘he will ask him’, and **apepailgaku** ‘before asking him’, since these forms all differ by the third letter for **apte-**. Similarly, at **ceña** ‘shore’ is the example **imarpiim ceñiini** ‘at the shore of the sea’.

Examples may indicate the grammatical case assignments for entities associated with a verb. Thus, at **cikir-** ‘to give’, there is the example **arnam cikiraa mikelnguq atkugmek** ‘the woman gives the child a parka’, showing that the grammatical object is the recipient and the gift is put in the “ablative-modalis” case (with **-mek**).

The examples written here with capitals and periods, with the key word being exemplified in italics (also in the translation), are examples taken from published books or other published texts.³ These examples have been selected for a variety of reasons. They may illustrate Yup’ik terminology related to the thing in question, like an example for **cauyaraq** ‘kayak rib’ that involves the word **saaganeq** ‘kayak stringer’, or an example (from a Bible translation) for **kuluvak** ‘cow’ that also involves the words for ‘sheep’, ‘goat’, and ‘camel’. Sometimes an example has been selected because it illustrates alternate names for things; thus an example for **nuqaq**, the common word for ‘atlatl’, uses **egun**, a less common regionalism for ‘atlatl’. A pair of examples might show a literal use and a figurative use; thus **mayurtuq** ‘he/it went up’, showing a man climbing a hill, and another example in which a person’s spirit is “soaring”. Some pairs of examples are selected to show a traditional use, like **(e)yagtuq** ‘he abstains, fasts’, indicating a traditional Eskimo abstinence practice associated with birth, death, or puberty, and another where the same word is used for Christian fasting as at Lent. Sometimes an example tells some interesting fact about nature or about Yup’ik beliefs. Sometimes the exemplified word plays a key role in a well-known traditional Yup’ik story or Biblical verse. Above all, these longer examples from books illustrate the richness, power, subtlety, and beauty of the Yup’ik language.

There are examples from traditional Yup’ik stories, from panel discussions of various aspects of Yup’ik culture, from imaginative creative writing, from factual descriptions of events in the personal life of individuals and generally of communities, from translations of brochures concerning topics such as health and housing, and from translations of the Bible and other Christian works. Selections come from Norton Sound, Nunivak, Hooper Bay–Chevak, as well as the majority, General Central Yup’ik, dialect. They come from publications dating from the 2000s, the 1900s, and the late 1800s. English translations of the examples have sometimes been taken from the books in question, but some of the books have no translations and many of the printed translations have been adjusted (in terms of degree of literalness) for the purposes of this dictionary.⁴ Most of these publications were produced in the modern standard writing systems, but others have been transliterated by various people.

The interested dictionary user is encouraged to seek the text and particular page where the quote in question can be found with its complete context and where the name and dialect of the Yup’ik speaker whose quote it is can be determined, in as much as many of the books are anthologies or panel discussions involving multiple speakers. The citations are given with these quotes in this dictionary by the first three letters in capitals of the title of the book, its date of publication, and the page number. For example, (CAU 1985:37) means that the quote is from page 37 of the book *Cauyarnariuq*, published in 1985. Books of the Bible are given as by four or five letters in capitals from the Yup’ik names of those books, with chapter and verse rather than publication date and page. For example, (AYAG. 12:1) means *Ayagniqarraaq*, that is, *Genesis*, chapter 12, verse 1.

³ A few come from unpublished stories (texts of which are included in Appendix 11), and websites.

⁴ There are a number of Yup’ik terms pertaining to items particular to Eskimo culture for which no single English word or simple phrase can serve as an accurate equivalent. An example is **qasgiq**. This is best described as by something like “traditional men’s community house, workshop, dance and celebration center”, but this is cumbersome. Some writers merely use the Eskimo word, italicized, in their English, but this does not seem appropriate in a dictionary that serves to explain Yup’ik. Instead, this dictionary, the word **qasgiq** is translated in *examples* as “kashim” (to be found in larger English dictionaries), though in the *entry itself* for the word **qasgiq** the fuller description is given. Other cases of this sort include **akutaq** “an edible mixture of berries or greens, seal oil, shortening, sometime dried flaked fish flesh, and sugar”, is translated routinely in *examples* as “Eskimo ice cream”, its popular English name, since no commonly agreed upon anglicization after the fashion of “kashim” exists, **uluq** is translated in *examples* as “semi-lunar knife” (rather than as “woman’s knife” or “ulu” which would have been alternate choices), **nukalpiaq** is “proficient hunter”, **qayaq** translated (of course) as “kayak”, **qaspeq** as “cloth cover parka”, **angalkuq** as “shaman”, and **kameksak** and **piluguk** as “skin boot” or “mukluk”.

A list of all such capital letter abbreviations with indications to lead one to the listing of the book in the references section of this dictionary is found under the heading “Printed Sources of Quoted Examples” at the end of the Introduction.

Multiword Lexemes and Neologisms

Multiword phrases seen by the compiler as lexicalized are given in small capital letters in the entries for both (or all) words that compose them. Thus, as part of both the entries for **nuna** ‘land’ and **pekte-** ‘to move’ is NUNA PEKTUQ ‘there is an earthquake’.

Words and phrases marked as ‘neologisms’ are consciously invented Yup’ik words that may not be yet be in general use, are restricted to a certain segment of the population, and so forth. Most of these are legal, medical, or fish-and-game neologisms from *Mumigcistet Kalikait* (Alexie et al., 1990), and Catholic neologisms are from *The Graded Catechism in Innuvit* (Lonneux, 1951). These books also contain a number of other neologisms of restricted interest that not included in this dictionary.

Indication of Dialect Restriction

If a word is restricted in use to a particular dialect area or areas, the abbreviation(s) for those dialect area(s) are given. This indication follows all glosses, examples, multiword lexemes, etc. for a particular entry, unless it applies only to one of several forms of, or one of several glosses for, that dictionary entry, in which case it is given at the appropriate place in the entry. The following dialect abbreviations are used:

NSU	Norton Sound–Unaliq (northern Norton Sound)
NSK	Norton Sound–Kotlik (southern Norton Sound)
NS	Norton Sound (both northern and southern shores)
Y	Yukon
HBC	Hooper Bay and Chevak
NI	Nelson Island
NUN	Nunivak Island; the letters NUN(A) indicate a word from the <i>Cup’ig Eskimo Dictionary</i> (Amos and Amos, 2003) ⁵
K	Kuskokwim
LK	Lower Kuskokwim
BB	Bristol Bay
NR	Nushagak River
LI	Lake Iliamna
EG	Egegik
UK	Upper Kuskokwim (i.e., around Aniak)
CAN	Canineq (around Kwigillingok, Kipnuk, Kongiganek, and Chefornek)
MY	middle Yukon

More information about these dialect areas is given in the introductory section on Yup’ik dialects (see below). One should see also the book *Yup’ik Dialect Atlas and Study* (Jacobson 1998) to see, among other things, just how very few are the words whose area of use coincides exactly with a particular dialect area! If dialect limitations are indicated for a given entry, the reader should conclude that there may be synonyms used in other dialect areas. These can be found through the English-to-Yup’ik Index toward the end of this dictionary.

⁵ While many words in that dictionary are also in this, words noted with “NUN(A)” have not been researched except by Amos and Amos, and one should look to to their dictionary for details concerning words (and in fact all Nunivak words). Note that the orthography they use is somewhat different from that of this book (see below).

Etymologies (Word Origin)

The etymology of the word is then given if it is a loan word, a derived form, an imitative word (onomatopoeia), or a word with a known proto-Eskimo or proto-Yup'ik antecedant.

A loan word (as from Russian, English, Aleut, Athabascan, etc.) is indicated as such along with the source word in the other language (and a phonetic transcription when needed) in the case of Aleut and Inupiaq or an English transliteration in the case of Russian.

A derived word is shown with the symbol "<" and its parent word and the derivational suffixes, that is, the postbase or postbases (and, in certain cases, enclitics), that compose it; if such postbase(s) are undetermined, then a question mark is used. The postbases are set off by dashes (and the enclitics by the equals sign). Postbases forming parts of derived words will be listed and explained in the postbase section of this dictionary (and enclitics in the enclitics section) even if the postbase in question is not productive. However, postbases that to our knowledge occur on only one word are not listed in the postbases section. For example, **niicugni-** 'to listen' is analyzed as < **niite-yug-neq¹⁻ⁱ³**-. By looking up the base, **niite-**, and consulting the postbases section for the next three components, one can see that **niicugni-** comes from **niite-** 'to hear' and postbases meaning 'to want to V', 'result of V-ing', and 'to complete N', so that **niicugni-** 'to listen' is literally 'to complete the result of wanting to hear'.

Component postbases are listed here not in the form in which they occur in the word in question, but rather in the form by which they are alphabetized in the postbases section, so that the user can locate them in that section. For example, **mingqun** 'needle' is cited as being composed of the verb base **mingqe-** 'to sew' and the postbase **-n** 'device for V-ing'. On consulting the postbases section under the listing **-n**, one sees that this postbase has a fuller form, **-un**, and that this is what accounts for the **u** in **mingqun**.

On occasion, some of the postbases in a subentry cannot be identified. In such cases the unidentifiable postbase is indicated by "?". For example, **mercuullugpak** 'highbush cranberry', is analyzed as < **meq-?-lluk-rpak**, and so consists of the base **meq** 'water', an unidentified postbase indicated by "?", and the postbases **-lluk** 'not quite good N' and **-rpak** 'big N'.

Many derived words have only a base but no postbases (just "?") listed. This indicates that although the form is clearly derived from that base, it is not possible to identify the postbase(s) with which it is formed. Thus **kitngu-** 'to capsize' is analyzed as < **kit'e-?-**, which informs the user that it is almost certainly derived from the base as shown, but that he should not expect to find the apparent postbase (since it occurs only on this one word) in the postbase section.

Certain entries are labeled as *imitative*, such as animal names like **peleqqel'er** 'frog', **aarraangiiq** 'oldsquaw' and **iggiayuli**, **iggiggiayuli** 'owl'; and such words as **Yaayaalria** 'Scandinavian', **pisalria** 'Yup'ik speaker of a dialect using **s** where others use **y'**, and **teggigte-** 'to giggle', and some of these also contain an identified postbase.

For words with cognates⁶ in other Eskimo languages, toward the end of the entry the derivation is shown by the sign "<" and "PE", "PY", or "PY-S" (for proto-Eskimo, proto-Yupik, or Proto-Yupik/Sirenik) along with the protoform from, referring to, and given in the orthography of *Comparative Eskimo Dictionary* (Fortescue et al., 1994).⁷ The symbol "+" in connection with PE, PY, or PY-S, indicates a proposed new comparative set not found in that dictionary though some have been included in the second edition of it (Fortescue et al., 2010).

A word with no etymology shown would be a non-loan, non-derived word found only in Central Yup'ik.

Further Indications of Relation to Other Entries

After the etymology, if any, may be found the symbol ">" followed by various words derived from the word in question. Note that these words would have been indented subentries in the 1984 edition of this dictionary.

⁶ *Cognates* are words of present-day languages that descend from the same word in the ancient proto language from which the present-day languages derive; they or may not have the same meaning or sound the same.

⁷ Note that a word may have a derivation within Yup'ik and also a proto-form, which implies that the derivation had occurred at the stage or time before the proto-language divided into the present languages.

The note *cf.* followed by another word indicates a possible relationship not certain enough for subentry treatment, or a relationship not of the sort that lends itself to subentry treatment. The use of the symbol “=” to indicate a phonological variant is discussed above.

Citation Forms for Yup'ik Words

Nouns are entered in this dictionary in their *unpossessed absolutive singular forms*.⁸ This is the natural citation form for a noun and is merely the base (i.e., the combining form) with the final letter altered to give an acceptable Yup'ik word.⁹ An example of a noun entry is **angyaq** ‘boat’.

Some nouns are simply not used in the singular. They are listed in the dual, meaning two exactly (or plural, meaning, for Yup'ik and other Eskimo languages, three or more); thus **ackiik** ‘eyeglasses’ or **qerrulliik** ‘pants’ are dual forms in Yup'ik. Within the entry the dictionary user is informed that these are duals and (usually) what the singular would be (useful when suffixes are added). Other nouns may be used either in the singular or in the plural (or dual) for a single item, or they may be used either in the dual or the plural for a pair of items. These conventional optional plurals and duals are noted by statements to that effect in the entries. They are mostly items viewed as consisting of a number of parts in the case of conventional plurals (for example, ‘village’, ‘parka’), or of two complementary parts in the case of conventional duals (for example, ‘sled’, ‘belly’).

As discussed briefly above, for verbs, no single completed form stands out as a citation form because there is no completed form of the verb that involves as minor a change from the base as does the unpossessed absolutive singular in the case of nouns. For this reason, this dictionary uses as the citation form of the verb the base form of that verb, followed by a hyphen to show that the form is abstract rather than an occurring (completed) word. An example of a verb entry is **nere-** ‘to eat’.¹⁰ Verbs are translated with English infinitives (in some cases with split

⁸ For an explanation of this see *Practical Grammar of ... Yup'ik*, p. 29.

⁹ See *Practical Grammar of ... Yup'ik*, p. 30. In summary,

<i>Unpossessed absolutive singular ends in:</i>	<i>Baseform ends in:</i>
prime vowel	same prime vowel
a (with superscript e or following Ct)	e
n	te
k	g
q	r

¹⁰ Several alternative possibilities for the citation form of the verb were considered. Since verb bases end in exactly the same patterns as noun bases do, one might apply the same processes and construct a citation form of the same sort as the unpossessed absolutive singular for nouns. Some native speakers do this when citing a Yup'ik verb while speaking in English. However, the forms so given are recognized by all speakers to be artificial. For example, no one would consider **mayuq** (from **mayur-** ‘to climb’) as a real Yup'ik word (except in some very limited circumstances). Furthermore, such forms would have value only as citation forms; they would still not be identical with the other abstract or artificial form, the base form which one needs to know to attach suffixes.

Another alternative for citing verbs is to single out an actual ending and let the resulting combination of the verb base and that ending serve as a citation form. The most obvious choice would be either an indicative form such as **mayurtuq** ‘he is climbing’ or a subordinative form such as **mayurluni** ‘(he) climbing’. While this has the advantage of using an actual occurring form of the word for the citation form, it has two disadvantages. First, neither of these forms reveals what the base is in all cases (thus, from **mayurtuq** one cannot tell whether the base is **mayur-** or **mayurte-**, and from **mayurluni** one cannot tell whether the base is **mayur-** or **mayure-**). Second, the spelling of these proposed citation forms is often far enough removed from the spelling of the base to put the entry at a different place alphabetically from where it would fall if the base were the citation form; this is especially the case with short bases, e.g., **ag'uq** ‘he goes over’ or **agluni** ‘going over’ would not appear very near **age-** in the dictionary, since words starting with **agi-** would fall between. Since we regard the base as the starting point and assume that someone with a degree of linguistic sophistication regarding Yup'ik will first determine the probable base from the form he has read or heard, this is where he should be able to find it in the dictionary.

The disadvantage of using the base as the citation form for a verb is that the casual reader who knows nothing about bases is likely to be put off by such abstract listings as **age-**, **mayur-**, etc. However, there is no good way to avoid this. We expect that users of this

infinitives, e.g., **nallu-** ‘to not know’), so that an English phrase beginning with the word ‘to’ signals that it is a translation of a Yup’ik verb base.

The vast majority of Yup’ik words are nouns and verb, though there a small number of words of other grammatical categories.

*Particles*¹¹ are uninflectable (or minimally inflectable words), usually adverbs, though some are conjunctions or exclamations. Being uninflectable, the choice of a citation form is obvious. Examples are **cakneq** ‘very’, **wall’u** ‘or’, and **aren** ‘oops’.

*Demonstrative pronouns*¹² are listed in their absolutive singular forms, from which the base may be determined by deleting the final syllable **na**. Demonstrative pronouns in all their inflected forms are also given in tables in Appendix 3. An example of a demonstrative pronoun entry is **pikna** ‘the one up above’, and its base is **pik-**.

*Demonstrative adverbs*¹³ are listed in their ‘localis’¹⁴ case forms, because they have no absolutive forms, with the localis ending, **ni**, in parentheses. The base may be determined by deleting the **ni** from these localis forms. Demonstrative adverbs in their inflected forms are also given in tables in Appendix 3. An example of a demonstrative adverb entry is **pika(ni)** ‘up above; in the area up above’.

The interrelationships between different demonstratives (both pronouns and adverbs) are discussed at length in Appendix 3 and in *Practical Grammar of ... Yup’ik*, Chapter 6 (p. 75 ff).

Although they are a type of noun base, *positional bases*¹⁵ usually appear with a possessed ending in speech. (Actually, many positional bases can appear with an unpossessed ending, but this gives them a narrow, fixed meaning.) For this reason the unpossessed absolutive form is rather misleading. Consequently, positional bases are presented as bases rather than as completed words, and they are followed by the hyphen, which shows that the form is a base and not a completed word (thus **kete-** ‘area toward water of (it)’, rather than the artificial unpossessed absolutive singular noun form ***ken**, which would likely not be recognized).

The hyphen is also used for those forms that are used only in the *quantifier/qualifier construction*,¹⁶ such as **tamar-** ‘all’ and **kii-** ‘only’, and are neither nouns nor verbs.

Note that, as mentioned several times above, the hyphen is also used with verb bases, which, like quantifier/qualifier bases, are unlikely to be confused with positionals.

For information on forms listed as *roots*, see the “Roots” section.

A Convention Concerning Gender in Third Person Singular

In as much as Yup’ik (like other Eskimo-Aleut languages) does not indicate gender in third person singular endings (and pronouns), a word with such an ending, such as **ang’uq**, may mean ‘he is big’, ‘she is big’, or ‘it is big’. In this dictionary such a word is translated only as ‘he is big’, which stands for all three.¹⁷ Exceptions are when the

dictionary will quickly learn to recognize bases of verbs for what they are. At any rate, following the bases and their translations are examples with simple actual occurring forms of the verbs.

See *Practical Grammar of ... Yup’ik* p. 19, for a different solution to this problem.

¹¹ See *Practical Grammar of ... Yup’ik*, p. 17, 166.

¹² See *Practical Grammar of ... Yup’ik*, p. 75 ff.

¹³ See *Practical Grammar of ... Yup’ik*, p. 81 ff.

¹⁴ Meaning ‘at —’ or ‘in —’.

¹⁵ See *Practical Grammar of ... Yup’ik*, p. 99 ff.

¹⁶ See *Practical Grammar of ... Yup’ik*, p. 346 ff. There are, however, a number of verb bases or slightly expanded verb bases that can be used in the quantifier/qualifier construction and are listed as such in this dictionary though not in *Practical Grammar of ... Yup’ik*. The quantifier/qualifier construction is called the independent relative in the first edition of this dictionary.

¹⁷ Note that this convention differs from the of *Practical Grammar of ... Yup’ik* which carefully balances the use of ‘he’, ‘him’ and ‘his’, with ‘she’, and ‘her’, in translations of third person singular (for humans).

verb is intrinsically gender limited, so that **irniug** is translated ‘she gives birth’, and **kuiguug** as ‘it is a river’, and when the verb appears in quoted text involving a female.

Concerning Scientific Names for Biota

Except in the case of domesticated animals, biota are glossed by their common name without qualifiers (unless necessary to distinguish two or more species in the Yup’ik area) and by the scientific name that refers to the particular species occurring in the Yup’ik area. Thus, **tertuli** is glossed as “lynx” (rather than “Canadian lynx”) and “*Lynx canadensis*”, which is specifically the Canadian lynx.

Explanation of Symbols (Other Than Those Mentioned Above) Used in Yup’ik Entries

Some Yup’ik entries have *, (**aq***), or (**ar**)- at the end of the Yup’ik word, or the symbol [e] at the beginning of the word. The meanings of these symbols will be explained here.

* is used after **q** on a noun to indicate that the base for that noun ends in an (unpredictably) *strong r*, that is, in an **r** that is retained before so-called *half-retaining* endings (marked with %).¹⁸ Thus, the word **maurlug*** ‘grandmother’ has an asterisk indicating that when the half-retaining ending %**mi** is added to it, the result is **maurlurmi** ‘at grandmother’s’. On the other hand, **angyaq** has no asterisk because the final **r** of its base is weak, so that when %**mi** is added, the result is **angyami** ‘in the boat’ with the **r** of the base dropped. Nouns ending in **eq** or **k** have no asterisks because all such nouns have a (predictably) strong final consonant on the base. Thus, even though **qaneq** ‘mouth’ and **kanaqlak** ‘muskrat’ do not have asterisks, one knows that the results of adding %**mi** are **qanermi** ‘in the mouth’ and **kanaqlagmi** ‘on the muskrat’. It should be understood that most of the words marked with asterisks are treated by some speakers as if they ended in weak rather than strong consonants. There is a great deal of individual variation in such words, but if a significant number of speakers treat the final consonant of a word as strong, we have marked it with an asterisk.

(**aq***) or (**ar**)- indicates that this segment of the word or base is deleted if it occurs at the end of the word, or before a consonant-retaining suffix that starts with a consonant.¹⁹ Thus, the cited form **qimugkauyar(aq*)** ‘puppy’ will be realized in most dialect areas as **qimugkauyar** ‘a puppy’ with the final **aq** dropped and **r** not changed to **q**, and the underlying **ar** (equal to **aq**) dropped in such forms as **qimugkauyartangqertuq** ‘there are puppies’, from underlying **qimugkauyarartangqertuq**. However, the **a** of that **aq** will appear in such forms as **qimugkauyaranguq** ‘he got a puppy’, where the suffix added is not a consonant-retaining suffix that starts with a consonant.

For the use of [e], see the discussion of “weak initial **e**” in the section of this introduction titled “The Problem of Initial **e** in Yup’ik Words.”

Subscripted “2” written after an English word indicates exactly two, as in ‘we₂’. This is used in English translations of Yup’ik words because Yup’ik distinguishes dual, exactly two, from plural, three or more. Therefore also, an English plural without subscripted “2” following it indicates at least three in number, except in cases where the English plural normally indicates a pair or where the duality is to be understood from context.

“Special” **te** Versus Regular **te** Terminating Verb Bases

In the 1984 edition of this dictionary a degree symbol appeared after certain verb bases ending in **te**, thus: **te-°**. Such a **t** (after **e** is deleted) becomes **l** with a certain type of suffixes, while for verb bases ending **te** without the degree symbol, the **t** becomes **s** or **y** with such suffixes. Thus, from **piniate-°** ‘to be weak’, comes **pinialngaituq** ‘he won’t be weak’, while from **aqvate-** ‘to fetch something’, comes **aqvasngaituq** ‘he won’t fetch something’. Also, verb bases in the type of **te-** that was indicated by a degree sign take “subordinatives” in **-na-** rather than **-lu-** for ‘by V-

¹⁸ See *Practical Grammar of ... Yup’ik*, p. 32.

¹⁹ See *Practical Grammar of ... Yup’ik*, pp. 50, 173, 187, and 291, and the section of this introduction on Yup’ik dialects.

ing, by being *V'*, and the postbase **-nguq** rather than **-lria/-llria** for 'one that is *V(ing)*'. Thus: **pinianani** 'being weak', but **aqvaluni** 'fetching something', and **pinialnguq** 'one who is weak', but **aqvatelria** or **aqvatellria** 'one fetching something'.

Now it turns out that the verb bases in **te-^o** are the bases that are negative or adjectival in nature, the so-called "special" **te**.²⁰ Since this is generally a predictable feature, *the degree symbol is not used* in this edition. However, if there is any question whether a **te** on a base is "special", sufficient examples are given to show the status of that base. Here are a pair of examples where it is hard to determine from the meaning of the base alone the status of **te**: the base **kumlate-** 'to be cold (water, solid, body part)', has "special" **te**, but **qerrute-** 'to be cold (person)', has an ordinary, non-"special" **te**. This is shown here by examples **kumlalngaituq** 'it won't be cold', **kumlanani** '(it) being cold', but **qerrusngaituq** 'he won't be cold', **qerrulluni** '(him) being cold'.

Roots

A number of entries are labeled *root*. A root in this sense is like a base, but it cannot be used with an ending unless a postbase is first added to the root before the ending. Because a root exists by virtue of the existence of forms containing that root, there are always derived forms listed for each entry presented as a root, and for this reason it has not always been necessary (or possible) to translate every root. There are five types of roots.

1) There are very basic "deep roots". An example is **ku-**, which apparently refers to the flowing of liquids, as can be seen by such probable derivatives as **kuik** 'river', **kuve-** 'to spill', **kuta** 'a drop', etc. At the present time we cannot even identify **-ik**, **-ve-**, or **-ta** as postbases. Roots such as this are listed in their proper alphabetical order in the dictionary along with lists of their probable derivatives, and these derivatives are listed as entries in their own proper alphabetical positions.

2) There are roots that are simply not in use at the present time, but that lie close to the surface. An example is **ali-**, which appears in the bases **alinge-** 'to be afraid' and **alike-** 'to be afraid of'. **-nge-** is identifiable as a postbase meaning 'to acquire', and **-ke-** is a postbase meaning 'to have as one's —'. Thus, **ali-** may be the base of an obsolete noun meaning 'a thing that one fears, object of fear', used in modern speech only in combination with these and a few other postbases. Such combinations of root and postbase are listed as entries as is the root, which is identified as a root but not translated.

3) There are roots that deal with dimensions such as width, thickness, loudness, etc. These *dimensional roots*²¹ occur in combination with the postbases **-tu-** 'to have to a large degree' and **-kite-** 'to lack to a large degree' (both taking intransitive endings only). These roots are given without translations but are labeled dimensional roots, and their derivatives are given entries. For example, **mam-** (*dimensional root*) and **mamtu-** 'to be thick' and **mamkite-** 'to be thin'.

4) There are roots that deal with emotional states and feelings. These *emotional roots*²² occur in combination with the postbases **-ke-** 'to feel thus toward' (taking transitive endings only), **-yug-** 'to feel thus' (taking intransitive endings only), **-tar-** 'to tend to feel thus' (taking intransitive endings only), **-narqe-** 'to cause to feel thus' and its negative **-naite-** (both taking intransitive endings only), and for some speakers, **-yagute-** 'to come to feel thus toward' (taking transitive endings only). These roots are given without translations but labeled as emotional roots, and their derivatives are given as entries. For example, **paqna-** (*emotional root*) and **paqnake-** 'to be curious about (it)', **paqnayug-** 'to be curious', **paqnatar-** 'to tend to be inquisitive', **paqnanarqe-** 'to makes one curious', and **paqnayagute-** 'to become curious about (it)'.

5) There are roots that deal with getting into, putting into, or being in a certain posture, position, situation, or state. These *postural roots*²³ occur in combination with the postbases **-te-** 'to get into or put into that position or state'

²⁰ See *Practical Grammar of ... Yup'ik*, pp. 104, 198, 231, and 419.

²¹ See *Practical Grammar of ... Yup'ik*, p. 248.

²² See *Practical Grammar of ... Yup'ik*, p.350.

²³ See *Practical Grammar of ... Yup'ik*, p. 348.

(taking both intransitive and transitive endings) and **-ngqa-** ‘to be in that poaition or state’ (taking intransitive endings only). In addition, postural roots may be used in the *quantifier/qualifier*²⁴ constructions in which a possessed relative ending is used directly on the root. For this reason, translations in the form of English adverbial gerunds or phrases are given for postural roots. An example of a listing for a postural root follows: **kamilar-** ‘being barefoot, without footwear’ (*postural root*), with the example **kamilarmi an’uq** ‘he went out without footwear’, and **kamilarte-** ‘to remove footwear’, and **kamilangqa-** ‘to be barefoot’.

Note that some dimensional, emotional, and postural roots have derivatives formed with postbases other than those mentioned above.

Complete lists of dimensional, emotional, and postural roots will be found in Appendix 5.

Entries Directing the Reader to a Preferred Spelling

Because of certain spelling problems caused by the inaudible initial **e** (see the section of this introduction titled “The Problem of Initial **e** in Yup’ik Words”), a number of words sound as if they should be spelled starting with a consonant but are actually, or preferably, spelled starting with **e** because of the way the word is pronounced in its different forms. In such cases the word is cited under its “naive” or “phonetic” spelling with a note to see the standard spelling with initial **e**, and the entire entry is enclosed in braces. Thus, the entry **mug-** ‘to suck on breast or bottle’ says “see **emug-**”.

Indication of the Polarity of Verb Bases

Verb bases are translated with the English infinitive construction, ‘to . . .’. Such translations, however, do not provide complete information about how verbs are used. For example, the information that **agiirte-** means ‘to approach’ does not tell one whether he can use an intransitive ending and say **agiirtuq** ‘he is approaching’, or a transitive ending and say **agiirtaa** ‘he is approaching it’, or both. The way that the English verb ‘to approach’ functions suggests that both intransitive and transitive constructions would be possible for the Yup’ik verb. This is not so, however; only the intransitive construction **agiirtuq** is possible in Yup’ik. In another case, knowing that **qecir-** means ‘to spit’, and given the additional information that both intransitive and transitive forms are possible in Yup’ik, one still does not know what is the object of the transitive form. In fact, it is the thing spit upon (rather than the thing spit out, as in English). Similarly, the knowledge that **ingqi-** is used with a transitive ending, **ingqia**, to mean ‘he diced it’, and that an intransitive form also occurs, is insufficient to determine whether that intransitive form, **ingqiuq**, means ‘it is diced’ or ‘he diced something’ (in fact, it means the latter). For these reasons, after the translation using the English infinitive construction, we have written the Yup’ik verb with the third person singular (unless singular is inappropriate) indicative intransitive ending²⁵ (if such a form exists), translated it, then given the Yup’ik verb with the third person singular to third person singular transitive ending²⁶ (if such a form exists), translated it, and then written the symbol “/”. Such information concerns the “polarity” of the verb.

Polarity is not indicated for verbs formed from dimensional, emotional, or postural roots, since with these types of verbs polarity is fully predictable (see the discussion of roots above). The reader should realize that some verbs function one way according to some speakers and another way according to others, and generally we did not record

²⁴ See above, and *Practical Grammar of ... Yup’ik*, p. 349.

²⁵ This is the ending meaning ‘he, she, or it is V-ing’; usually ‘he’ or ‘it’ translates the subject as a matter of convention.

²⁶ This is the ending meaning ‘he, she, or it is V-ing him, her, or it’.

all possible variations.²⁷

Also, many of the verbs in this but not the 1984 edition are rare and/or old words for which polarity and other transitivity information could not be ascertained, and thereof must be here omitted.

Polarity information will be found with the general Central Yup'ik forms of verbs rather than with the Nunivak, Hooper Bay–Chevak, or Norton Sound variants.

With respect to the question of polarity, verb bases may be categorized in five groups.

1) *Intransitive-only verbs*. These verbs do not generally take transitive endings directly. They include descriptive or adjectival verbs such as **ange-** 'to be big' and **puqig-** 'to be intelligent', and also certain action verbs such as **tuqu-** 'to die' and **qavar-** 'to sleep'. These verbs have their polarity indicated in the dictionary as shown in the following example:

tuqu- to die # **tuquuq** 'he died' /

The slash symbol "/" shows that this base cannot be used directly with a transitive ending.

2) *Transitive-only verbs*. These verbs do not normally take intransitive endings directly. Some examples are **ullag-** 'to approach', **assike-** 'to like', and **tegu-** 'to take'. Some of the verbs in this group *can* take intransitive endings, but only marginally and in conjunction with a word such as **ellminek** 'himself or **ak'a** 'already'. In such cases the meaning is reflexive: **ellminek assikuq** 'he likes himself'; or passive: **ak'a teguuq** 'it has already been taken'. A sample entry for a transitive-only verb is the following:

assike- to like # **assikaa** "he likes it" /

The lack of an intransitive example before "/" indicates that this base cannot be used directly with an intransitive ending, except perhaps in the special reflexive or passive sense, which will be indicated by examples following "/".

3) *Patientive verbs*. These verbs can take both intransitive and transitive endings. The meaning with an intransitive ending is passive or reflexive.²⁸ To put it another way: Given a certain situation described using a patientive verb with a transitive ending, describing the same situation as closely as possible with an intransitive ending requires that the noun that was the object with the transitive verb be the subject with the intransitive verb (the role of the noun in the sentence changes, but the noun remains in the absolutive case). Some examples of patientive verbs are **kuve-** 'to spill' (**meq kuv'uq** 'the water spilled', **meq kuvaa** 'he spilled the water'), **tamar-** 'to lose' (**tamartuq** 'it is lost', **tamaraa** 'he lost it'), and **makete-** 'to get up' (**maktuq** 'he got up', **maktaa** 'he put it upright'). A sample entry is the following:

kuve- to spill # **kuv'uq** 'it spilled'; **kuvaa** 'he spilled it' /

4) *Elemental verbs*. Secondly, a group of verbs deals with processes of nature and takes both transitive and intransitive endings with almost identical meanings.²⁹ That is, the meaning stays the same if an intransitive ending is replaced by a transitive ending, with what was the subject of the intransitive verb becoming the object of the

²⁷ Furthermore, a given verb when used with certain suffixes may be able to take endings it does not normally take. For example, **ikayur-** 'to help' normally does not take intransitive endings, but when expanded by the postbase **-yug-** 'to want', which usually does not change polarity, this verb *can* be used with an intransitive ending: **ikayuryugtuq** 'he wants to be helped'. Such information is noted by means of examples occurring after "/". As a general rule, descriptive or adjectival verb bases such as **ange-** 'to be big' or **assir-** 'to be good' cannot be used with transitive endings, but in the subordinative mood, they *can* be so used: **angluku** '(making) it big', **assirluku** '(acting) toward it in a good way'. The interested reader should refer to Tadataka Nagai's *Agentive and Patientive Verb Bases in North Alaskan Inupiaq Eskimo* (2008) for an excellent discussion of this entire issue.

²⁸ The dividing line between patientive and transitive-only verbs gets rather hazy. A patientive verb with a reflexive intransitive such as **makte-**, where the intransitive **maktuq** can be interpreted as 'he put himself upright', is not so different from a transitive-only verb like **assike-**, where the marginally used intransitive **ellminek assikuq** means 'he likes himself'. There is, however, considerable difference between a transitive-only verb which lacks even a marginal reflexive intransitive, and a patientive verb like **kuve-** 'to spill', where the intransitive **kuv'uq** is more passive than reflexive.

²⁹ Elemental verbs may be considered a special type of patientive verb, since the only difference between the pair of sentences **meq kuv'uq** 'the water spilled' and **meq kuvaa** 'he spilled the water', and the pair of sentences **meq cikuuq** 'the water froze' and **meq cikua** 'it (nature) froze the water' is the range of entities that can be the subjects of the transitive forms — elemental verbs cannot take an overt subject, while patientive verbs may take any subject.

transitive verb. The subject of the transitive forms of these verbs is never denoted by a separate noun. A sample entry is:

ciku- to freeze # 'cikuuq' or 'cikua' it froze /

There is in fact a slight difference between the intransitive and the transitive of elemental verbs. With the intransitive the emphasis is on result, while with the transitive the emphasis is on process. Thus, one would say **cikuuq** (intransitive) to suggest that freezing had occurred and was now probably complete, while one would say **cikua** (transitive) to suggest that freezing had occurred and perhaps was still occurring. Since the difference is mainly one of emphasis and since various speakers might differ in their use of the intransitive or transitive of these verbs to describe the same situation, we translate the intransitive and transitive of elemental verbs the same way.

One should note that elemental verbs are not the only verbs for which a subject is not denoted by a separate noun. Other, usually transitive-only, verbs concerned with weather or other natural phenomena also take an *impersonal subject*, and this is noted in the entries for those verbs. Thus, **pircir-** 'to be storming (blizzard)' (*impersonal subject*) **pircirtuq** 'there is a blizzard' /. One does not use an overt subject noun with this verb.

5) *Agentive verbs*. These are the third kind of verbs that may take either transitive or intransitive endings. This group is distinguished from the patientive verbs in that given a certain situation that can be described with a sentence using an agentive verb with a transitive ending, to describe that situation as closely as possible with a verb with an intransitive ending, the noun that was the subject of the transitive verb remains the subject of the intransitive verb (although its case changes).³⁰ Some examples are **nere-** 'to eat' (**angun ner'uq** 'the man is eating', **angutem neraa** 'the man is eating it'), **tangerr-** 'to see' (**tangertuq** 'he sees', **tangrraa** 'he sees it'), and **kipute-** 'to buy' (**kiputuq** 'he is making a purchase', **kiputaa** 'he bought it'). A sample entry is:

nere- to eat # ner'uq 'he is eating'; neraa 'he is eating it' /

References to Unverified Word Lists and to E. W. Nelson's Work

A comment in an entry such as "*cf. Khromchenko 1824 list*" or "*cf. Nelson 1877–1881*" refers the reader to the appendectical section of this dictionary titled "Unverified Words from Old Sources"; however, a number of references read "*E. W. Nelson (ESK 1889:–)*", which refers to pages in the pioneering ethnography *The Eskimo about Bering Strait*, published in 1889 and reprinted several times.

SPECIAL PROBLEMS AND TOPICS

The Problem of Verb Tense in Translating from Yup'ik to English

Yup'ik does not have a category of verb tense in quite the same sense that English does. Some postbases place an action in the future (**-ciqe-**, **-ngaite-**, **-arkau-**, etc.), and others place an action definitely in the past (**-llru-**, **-uma-**, etc.), but a verb without one of these time-fixing postbases may refer to an action that is happening at the time of the utterance or to an action that has happened in the past. This structural difference between Yup'ik and English has led to certain problems in translating the examples in the dictionary.

One may distinguish three groups of verbs for the purposes of this discussion:

1) *Descriptive or adjectival verbs*. These are verbs such as **ange-** 'to be big' and **nanite-** 'to be short'. When one of these verbs is used without a time-fixing postbase, an ongoing state is being described. Thus **ang'uq** means only 'he

³⁰ For more information on the distinction between agentive and patientive (or non-agentive) verbs and their relation to the "detransitive" (or half-transitive) postbase, see *Practical Grammar of ... Yup'ik* p. 122 ff. It is interesting to note that English also has a distinction between agentive and patientive. One does not say 'he spilled' to mean 'he spilled something', but one does say 'he ate' meaning 'he ate something'. The plain intransitive of the English verb 'to spill' (without 'something') applies to liquids that spill, not to people who spill them. English and Yup'ik coincide in this respect with this particular verb, though by no means with all such verbs.

or it is big', not 'he or it was big (and perhaps is no longer big)'.

2) *Verbs describing actions of more than a moment's duration.* These are verbs such as **kuimar-** 'to swim', **qavar-** 'to sleep', **nere-** 'to eat' and **yurar-** 'to dance'. When one of these verbs is used without a time-fixing postbase, it may refer to an action occurring either in the present or in the past, depending on the context. Thus, **kuimartuq** may mean either 'he is swimming' or (if the context is definitely past time) 'he swam'. In the context, or rather the lack of context, provided in the dictionary examples, it is most logical to translate this verb with the English present progressive. Thus **kuimartuq** is translated 'he is swimming' rather than 'he swam', **qavartuq** 'he is sleeping', and **ner'uq** 'he is eating', even though these verbs could mean 'he swam', 'he slept', and 'he ate' in suitable contexts.

3) *Verbs describing momentary actions.* These are verbs such as **igte-** 'to fall', **ane-** 'to go outside', **tekite-** 'to arrive', and **tuqu-** 'to die'. These verbs present major problems in translating forms without time-fixing postbases. A form such as **igtuq** may mean either 'it is falling' (i.e., it is in midair or on the point of falling) or 'it fell'. Our policy with respect to the verbs in group 2 suggests that for uniformity we should translate these with the English present progressive tense ('it is falling'), but this is in fact the less common meaning in Yup'ik; 'it fell' is more natural. Note too that 'it is falling' in English may mean either 'it is in midair' or 'it is on the point of falling', but the second English meaning is an uncommon meaning for **igtuq**. The common Yup'ik form for 'it is falling, on the point of starting to fall' is **igtenguq**, literally 'it is beginning to fall', or **igteqatartuq**, lit. 'it is about to fall'. For these reasons, we have translated the verbs of this group with the English past tense, thus **igtuq** 'it fell', **an'uq** 'he went out', **tekituq** 'he arrived', **tuquuq** 'he died'. The English present progressive form ('it is falling', etc.) encompasses both the present instant and the near future, while the Yup'ik form (**igtuq**, etc.) lacking a time-fixing postbase encompasses both the present instant and the recent past.³¹

The Problem of Initial e in Yup'ik Words

The problem of whether certain Yup'ik words have or do not have an initial **e** has been very troublesome in compiling this dictionary. It will also be a problem for those using the dictionary. For these reasons, it is worthwhile to discuss in some detail the situation with regard to initial **e** in Yup'ik and our policy in dealing with it.

The transcriptions in brackets, "[]", in the following discussion could be called "semi-phonetic" in that the standard Yup'ik orthography is followed for the values of the letters and for automatic devoicing, but inaudible **e** is not written, barely audible **e** is raised above the line, and length of vowels, whether rhythmic (i.e., from a single vowel) or inherent (i.e., from a double vowel), is indicated by a colon after the vowel (which is never written double). Consonant gemination, whether automatic or otherwise, is also indicated by a colon. For example, in this transcription **tekituq** 'he arrived' is [teki:tuq], and **tekiituq** 'he doesn't have earwax' is [teki:tuq].

Consider the words [ni:ta:] 'he heard it' and [mu:ta:] 'he took her to the clinic, took it for repair'. Both have initial nasal sounds followed by phonetically long vowels. The imperative or optative forms of these words are [ni:sgu] 'hear it!' and [musgu] 'take her to the clinic!' Because **i** is long in both [ni:ta:] and [ni:sgu], one can conclude that the base of these words is **niite-** and that [ni:ta:] is **niitaa** and [ni:sgu] is **niisgu** (where the **t** of the base has changed to **s**). However, the **u** is long in [mu:ta:] but short in [musgu], so one must conclude that the base of these words is **emute-**, and [mu:ta:] is **emutaa** (with rhythmic length on the second open syllable **mu**), while [musgu] is **emusgu** (without rhythmic length on the closed syllable **mus**).³² The initial **e** of **emutaa** and **emusgu** is inaudible, its presence revealed only through its effect on rhythmic length. In this dictionary these two bases are listed as **niite-**

³¹ An alternative way of dealing with this problem, and one that is sometimes followed, is to translate as a convention all Yup'ik forms which lack time-fixing postbases with the English simple present ('he V-s') construction, letting this construction serve as an abbreviation for 'he V-s, is V-ing, V-ed'. Thus, **kuimartuq** would be translated 'he swims' and **igtuq** 'it falls'. While this convention suits some verbs well (e.g., 'he likes her' is the normal English present of the verb 'to like' and is a good translation of **assikaa**), for the most part the simple present in English means 'he usually or regularly V-s', and unless one has become used to this convention and can accept an unusual sense of, for example, 'he swims', one will not think of this as a good translation of **kuimartuq**, but rather of **kuimalartuq**, **kuimarlartuq**, or **kuimatuq**, all forms with postbases indicating customary or habitual action.

³² In Norton Sound only, however, the base is **muute-**, as can be seen by the NSU form [mu:sgung], i.e., **muusgung** 'take it in for repair!'.

and **emute-** and alphabetized accordingly. However, since many people using the dictionary are likely to look under **muute-** if they hear [mu:ta:], we have also listed **muute-** in the **m** section with instructions to look under **emute-**.³³

Another example of the problem of inaudible initial **e** whose presence is revealed only in derived forms is in the homophonous [yagtuq] 'he is fasting, abstaining' and [yagtuq] 'he is stretching out his arms'.³⁴ For the first meaning, the base is **eyag-**, as can be seen from such forms as [ey:i:] 'abstain!' and [ey:aumauq] 'he has been abstaining'. Thus the word [yagtuq] 'he is abstaining' should be written **eyagtuq**, but in this dictionary **yag-** 'abstain' is listed in the **y** section with directions to see **eyag-**, the main entry. On the other hand the base of [yagtuq] 'he is stretching out his arms' is **yagte-**, as can be seen from the derived form [yagu:tut] 'they are stretching out their arms to or against one another'.³⁵ There is no audible difference between **eyagtuq** and **yagtuq**; the presence or absence of initial **e** is revealed only in other derived forms.

The word for 'handle, shaft' is [ʔpu] with a barely audible initial **e** for some speakers, and for others it is [pu]. However, for all speakers, the effect of the initial **e** emerges in such forms as [ep:ua] 'its handle' and [ʔpu:lek] or [pu:lek] 'one with a handle' (where rhythmically lengthened **u** reveals the presence of the initial **e**, thus **epulek**). Thus, the word for 'handle, shaft' is given in the dictionary as **e pu**.

Surveying words that are candidates for having an inaudible or barely audible initial **e**, the following conclusions can be drawn:

1) There are very few bases in Yup'ik of the form CV or CVC.³⁶

2) Of the patterns #eCV(C)(V)(C) and #CV₁V₁(C)(V)(C), the former pattern is by far the more common. The latter pattern has generally arisen through historical velar dropping or reinterpretation.³⁷

The following is a list of #eCV(C)(V)(C) bases where V is a prime vowel³⁸ and some form of the word reveals the presence of initial **e**:

eciq taut membrane

ecur- to be murky

ega- to cook by boiling

egaleq window

elag- to dig³⁹

elite- to learn⁴⁰

ella weather, awareness⁴¹

³³ As we shall see later, among bases where this problem arises, the pattern with initial **e** is more common, so that perhaps it would make more sense to list a spelling **enite-** with directions to see **niite-** also (though in fact people rarely spell this word with initial **e**).

³⁴ In HBC and NUN 'he is stretching out his arms' is [cagtuq] rather than [yagtuq], and the base for 'to fast' is **yaag-**.

³⁵ If the base for [yagtuq] 'he is stretching out his arms' had an initial **e**, the derived form for 'they stretch out their arms to one another' would be *[ya:gutut].

³⁶ The only such bases are **pi-** 'thing' and **ca-** 'what, thing', **yug-** 'person', and the demonstrative bases. Even **yug-** may have traces of an historical initial **e**.

³⁷ For example, the **ii** in **niite-** 'to hear' is from velar dropping and the associated vowel changes from **nagate-**, which is the actual form of this base in Siberian Yupik, where intervocalic front velars are not dropped. An example of reinterpretation is HBC and NUN **yaag-** 'to abstain' (rather than **eyag-**), as can be seen from their form **yaaga** 'abstain!'.

³⁸ Bases of the form #eCe(C) will be discussed below.

³⁹ In HBC and NUN this base has been reinterpreted as **laag-**.

⁴⁰ In NSU this base has been reinterpreted as **liite-**.

⁴¹ In the Yukon **ella**, **elli-**, **ellur-** appear as **cella**, **celli-**, **cellur-**, while in HBC these words appear as **cilla**, **cilli-**, **cillur-**.

elli- to whet
elli- to put, to place
ellur- to slide
emute- to take or go for medical aid or repair⁴²
enig- to put pressure on
enir- to point at⁴³
enur- to lack
epu handle
equg- to carry on one's shoulder
equk wood
equme- to ravel, to rip at the seam
eriq milt
erina voice
eritar- to pluck
erur- to wash
esiq egg yolk
essugi- to scrub
eyag- to fast, to abstain⁴⁴
eyir- to populate
eyur- to defend verbally; to jell⁴⁵

3) Relatively few words have initial fricatives other than **y** or (voiceless) **s**. Most words that sound as if they have initial fricatives actually start with an inaudible **e** in the standard spelling. Thus **[ri:na]** 'voice' is **erina** and **[ga:leq]** 'window' is **egaleq**. (This can be confirmed by comparing derived forms, such as **erinvak** 'deep voice' and **egalra** 'its window'.) There are, however, a few (other than loan words) with initial **l**, and a very few with initial **g** or **v**. It is probable that at one time there were no Yup'ik words with initial fricatives other than **y** or **s**.⁴⁶

4) Initial **e** followed by **Ce** will be fully audible, unlike **e** followed by **CV**, where **V** is prime, which is often inaudible or barely audible. Thus, compare **egesgu**, i.e., **[egesgu]** 'throw it away' and **egaleq**, i.e., **[ga:leq]** or **[°ga:leq]** 'window'. Also, contrast **eneq**, i.e., **[eneq]** 'bone' and **nek**, i.e., **[nek]** 'two houses'.

In the case of possible initial **e** followed by **CV**, where **V** is prime, sometimes there is no way to tell whether there is an initial **e**. For example, **[qu:ga:rpak]** 'legendary creature identified with mammoth or mastodon' could be either **equgaarpak** or **quugaarpak**. In this dictionary, such words are listed without an initial **e** unless there are historical reasons to suggest an initial **e** (as is the case with the example here), and in such cases the word is listed both ways with cross-references at each spelling to the other spelling.

The above discussion deals with the difficulties involved in determining whether or not a word has an inaudible or barely audible initial **e**. The following discussion deals with the problem of initial **e** actually being dropped, not only to the extent that it is inaudible, but also to the extent that it cannot be written without misrepresenting the

⁴² In NSU this base has been reinterpreted as **muute-**.

⁴³ In HBC and NUN this base has an initial **k**: **kenir-**; in NSU it has been reinterpreted as **niir-**.

⁴⁴ In HBC and NUN this base has been reinterpreted as **yaag-**.

⁴⁵ In HBC, NUN, and NS this base is **igur-**.

⁴⁶ The few words with initial **g** or **v** are recent reinterpretations of words that originally had initial **e**, as are some of the words with initial **l**. Most of the other words with initial **l** are loan words from Russian or English.

pronunciation of the word. There are three reasons for initial **e** being dropped completely: (1) reinterpretation; (2) loss of initial **e** in a derived word; and (3) regular dropping of so-called weak initial **e** in certain forms of the word.

1) *Reinterpretation*: Some speakers have reinterpreted a base with inaudible initial **e** in such a way that the initial **e** is no longer present in their speech. All speakers (outside of HBC and NUN) say [**ni:ra:**] ‘he is pointing at it’. Some of these speakers say [**nirluku**] ‘pointing at it’ and [**en:iuta:**] ‘he is pointing something out to her’, while others say [**ni:rluku**] and [**ni:ruta:**], respectively. From this we may conclude that for the former speakers the base is **enir-**, and for them [**ni:ra:**] is **eniraa** (and the other two words discussed are **enirluku** and **eniutaa**). For the second group of speakers, on the other hand, the base is **niir-** and for them [**ni:ra:**] is **niiraa** (the other two words being **niirluku**, **niirutaa**). Both patterns are in wide use, and both forms of the base are listed in the dictionary.⁴⁷

Some reinterpretations encountered have been judged to be restricted to a very small locality or to an individual and probably not lasting in the language, and for that reason they have not been entered in the dictionary. For example, some speakers have reinterpreted **egaleq** ‘window’ as **gaaleq**, as can be seen from their plural **gaalret**, i.e., [**ga:lret**] (rather than the standard **egalret**, i.e., [**egalret**]). Only **egaleq** and not **gaaleq** has been entered, but there is the possibility that such a reinterpretation may become widespread and lasting or that our judgment of its present-day status is in error.

2) *Derived words*: In a number of cases there are words without initial **e** yet that clearly are derived from words that do have initial **e**. This phenomenon occurs primarily (perhaps exclusively) when initial **e** is followed by **k** or **q**. Consider the form **ek’uq**, i.e., [**ek:uq**] from the base **eke-**. This form has two unrelated meanings: (1) ‘he got in’ and (2) ‘it is burning’. There are also the words **ekumaluni**, i.e., [**eku:malu:ni**] ‘being in’ and **kumaluni**, i.e., [**kuma:luni**] ‘being lit’. Both come from the base, or pair of homophonous bases, **eke-**, the postbase **-uma-** meaning ‘to be in a state of having V-ed’, with the subordinative ending **-luni**. However, the expanded base **kuma-** ‘to be in a lit state’ has dropped the initial **e** of its parent base and must now be considered a lexicalized base in its own right, which cannot be written with initial **e** without upsetting the rhythmic length pattern. The expanded base **ekuma-** ‘to be in a state of having gotten in or having been put in’ follows the predictable pattern and keeps the initial **e** of its parent base. To deal with this situation, the derived base **kuma-** ‘to be lit’ is listed under **eke-** ‘to be burning’ and also in the **k** section with the note that it is from **eke-**. The derived form **ekuma-** ‘to be in’ is totally predictable as to form and meaning, and therefore appears only in an example under **eke-** ‘to get or put in’.

Further examples of initial **e** dropping in a derived word are **kilir-** ‘to wound’ from **ekiq** ‘wound’, **keneq** ‘fire, match’ from **eke-** ‘to burn’, and **qenerte-** ‘to be angry’ from **eqe-** ‘to get peeved or infuriated’.

3) *Weak initial e*: Some bases have an initial **e** that drops in some or all forms of the word. This is what *Practical Grammar of ... Yup’ik* calls ‘weak initial **e**’.⁴⁸ A weak initial **e** should not be written in a form in which it is not heard lest a misrepresentation of the pronunciation of the word be given. For example, the word for ‘house’ has a weak initial **e**, which is dropped in such forms as **nerpak**, i.e., [**nerpak**] ‘big house’, and **nen’i**, i.e., [**nen:i**] ‘his own house’, which contrast with **enerpak**, i.e., [**enerpak**] ‘big bone’, and **eneni**, i.e., [**enen:i**] ‘his own bone’, from a base where the initial **e** is not weak.⁴⁹ We know that the base for ‘house’ does have an initial **e**, albeit a weak initial **e**, because this **e** is preserved in forms of the word where the following consonant is in turn followed by a prime vowel, such as **ena**, i.e., [**ˈna**] ‘a house’, and **enii**, i.e., [**en:i:**] ‘his (another’s) house’. The case of a word that has dropped a weak initial **e** differs from the case of a word that has an inaudible initial **e** that must still be written. Compare the discussion above of weak initial **e** in the word for ‘house’ with the earlier discussion of the initial **e** of the base **emute-** ‘to seek medical aid’; in words based on **emute-**, the initial **e**, though inaudible, must be written for the sake of rhythmic length in the word. Weak initial **e** occurs on some bases that have **e** as their second vowel. For some bases that have a weak initial **e** in General Central Yup’ik (abbreviated GCY henceforth), HBC has an initial **e** that is

⁴⁷ The older of these two forms is **enir-**, as can be seen from the fact that HBC and NUN have **keniraa** ‘he is pointing at it’, **kenirluku** ‘pointing at it’, etc., so that for them the base is **kenir-**, as it is in Siberian Yupik and Sugpiaq. The oldest form is **kenir-**, followed by **enir-**, and the newest form is **niir-**.

⁴⁸ See *Practical Grammar of ... Yup’ik*, p. 44.

⁴⁹ However, very many writers do just this, always writing initial **e** on ‘house’ words, thus, for example, writing **enerpak** both for ‘big house’ and for ‘big bone’, even though the two Yup’ik words sound (slightly) different. In practice there is little or no confusion.

not weak. In NUN, no initial **e** is weak.

Weak initial **e** is indicated by enclosing that **e** in brackets when the word is listed in the dictionary. Thus, the word for ‘house’, which has an initial **e** that is weak everywhere except in HBC and NUN, is listed: [**e**]na^e (NS, Y, K, NI, CAN, BB, NI, LI form), **ena**^e (HBC, NUN, EG form) house; place.

This dropping of weak initial **e** may cause problems for a person using this dictionary. If one hears or reads **nek’a**⁵⁰ or **nerpak**, he should look in the **e** section rather than in the **n** section. However, we have given an entry **na**^e ‘house’ with directions to see **ena**^e, enclosing the entire cross-reference entry in braces. For [**e**]na^e there are forms with audible initial **e**, but for some words the initial **e** is not audible in GCY in any form of the word. Such words are listed both with and without [**e**], and the listing without [**e**] notes that the word *underlyingly* has [**e**].⁵¹

The following is a list of words or bases starting with weak initial **e** in GCY:

GCY	HBC	NUN	English translation
[e]ceg-/ [e]sseg-	[e]ceg-	esseg-	to cut fish for drying
[e]cer-/ [e]sser-	[e]cer-	esser-	to sweat
[e]cgar-/ [e]ssgar-	[e]cgar-	essgar-	to awaken
[e]leg-	lege-	legte-	to singe, burn
[e]leq	neleq	neleq	fart
[e]meq	[e]meq	emeq	water
[e]na ^e	ena ^e	ena ^e	house
[e]ngla ^e	kengla ^e	kengla ^e	boundary
[e]nglar	nenglar-	englar-	to laugh
[e]nglu	—	—	beaver house
[e]nglugte-	englugte-	—	to dent
[e]ngva ^e	engva ^e	engva ^e	mucus
[e]nqar-	enqar-	enqar-	to recall
[e]qe-	—	eqe-	to shrink
[e]ssngur-	—	—	to overflow
[e]teq	[e]teq	eteq	anus
[e]vek	evek	—	grass
[e]verte-, everte, verte-	erevte-	erevte-	get a foreign object in one’s eye

The following words, though of the same #eCe form as those above, do not have weak initial **e**:

⁵⁰ In forms where the weak initial **e** is dropped and the following syllable is light and open, the consonant after that syllable is geminated: thus **nek’a**, i.e., [**nek:a**] ‘my house’. The reason for this gemination is the tendency of the language to use gemination as a device for keeping stress on the stem of a word. This tendency also accounts for the gemination in words such as **ner’uq** ‘he is eating’ from **nere-**, **yuk’a** ‘my child’ from **yuk**, and **ing’umi** ‘in that one’ from **ingna** (see Jacobson 1984, *Stress Conspiracy*). Note that many people do write **eneka** (depending on the presence of “hated” **e** to indicate gemination of **k**) for ‘my house’ rather than **nek’a** as here, and also **enerpak**; few would write, for instance, **emeqa** for ‘my water’ rather than **meq’a** as here.

⁵¹ Note that in particular that many Yup’ik writers eschew an initial **ng** (as the language itself did historically) and always write, for example, **engeli**. This word can be found in this dictionary at the listing **ngela**^e ‘border’, with example, **ngelii** ‘its border’, and under the underlying form [**e**]ngela^e ‘border’.

<i>GCY</i>	<i>HBC</i>	<i>NUN</i>	<i>English translation</i>
eka^ε, eke-	eka^ε, eke-	eka^ε, eke-	fire, to burn
eke-	eke-	eke-	to get in
eneq	neneq	neneq	bone
epe-	epe-	epe-	to suffocate
eqe-	eqe-	eqe-	to get peeved

In addition to problems caused by initial **e** in native Yup'ik words, there are two groups of loan words from Russian whose initial letter configurations cause spelling problems.

One group is the words that start essentially with a consonant cluster: **st**, **sk**, or **sp**. An example is the loan word for 'table', [**stu:luq**] or [**estu:luq**]. Some speakers admit the non-Yup'ik initial consonant cluster in words of this sort, and for them the word is entered as **stuuluq**. For those who use an initial voiceless **e** to avoid an initial consonant cluster, the word is entered as **estuuluq**.⁵²

The second group is those words that begin with **l**. Given the Yup'ik language's disinclination to begin words with fricatives such as **l**, it is tempting to try to put an initial **e** on such words. In some cases this is possible; for example, 'ribbon' [**lintaq**] could be either **lintaq** or **elintaq**, and 'horse' [**lu:ssitaq**] could be either **luussitaq** or **elussitaq**. In other cases it is impossible to add an initial **e**, even an inaudible one, onto the loan word without upsetting the rhythmic length or gemination pattern; for example, 'cloth', [**luma:rraq**], can be written only **lumarraq**, and 'spoon', [**lu:ska:q**], can be written only **luuskaa**.⁵³ For the sake of a consistent treatment of these loan words, and because there are some native, non-loan Yup'ik words that do begin with **l** (e.g., **luqirte-** 'to slant'), initial **e** is not added to any loan word beginning with **l**.⁵⁴

YUP'IK DIALECTS

General Central Yup'ik

The Central Yup'ik dialects of the Yukon, the Kuskokwim, the upper Kuskokwim, Nelson Island, Canineq, Bristol Bay, the Nushagak River, and Lake Iliamna (abbreviated Y, K, CAN, UK, NI, BB, NR, and LI respectively) have a fairly uniform phonology and will be referred to collectively as *General Central Yup'ik* (abbreviated GCY). The remaining four dialects of Central Yup'ik — Norton Sound (NS), Hooper Bay–Chevak (HBC), Nunivak Island (NUN), and Egegik (EG) — differ in a number of respects from GCY and from one another, though HBC, NUN, and EG share some traits.

GCY itself can be divided into "core" GCY, which consists of the Kuskokwim and Bristol Bay, and "peripheral" GCY, which consists of the Yukon, the upper part of the Kuskokwim around Aniak, and Lake Iliamna. Nelson Island and the Nushagak River have elements in common with both core and peripheral GCY.

After discussing the difference between core and peripheral GCY, we shall discuss NS, HBC, and NUN, pointing out their points of divergence from GCY.

Lexically, core and peripheral GCY differ in that core GCY has a number of imovative words, especially for body parts, that are not found in peripheral GCY nor in other Eskimo languages (though some of these terms are used in NS, HBC, and/or NUN, and some have come into use in peripheral GCY in recent times). The following is a list of such terms:

⁵² Other Russian initial consonant clusters are always broken by an **e** between the consonants in Yup'ik, for example **kelipaq** 'bread', **pelit'aaq** 'stove'.

⁵³ [**lu:ska:q**] could be written **elu'uskaa**, but this is an unnecessary elaboration, and no such possibility exists for [**luma:rraq**].

⁵⁴ Recall that some Yup'ik writers would use an apostrophe before initial **l** to indicate that it is not to be devoiced though initial.

core GCY	peripheral GCY	English translation
alungun (lit. 'device for lapping')	ulu	tongue
ayaun (lit. 'supporting device')	kumlu	thumb
unan (lit. 'hand-working device')	aiggaq	hand
cingun (lit. 'pushing device')	ikusek	elbow
asguruaq (lit. 'imitation going against')	negiliq	parka ruff
qamiquq	nasquq	head
kenurraq (from eke- 'to burn')	naniq	lamp
canek	evek, vek	grass

Phonologically, core GCY has a greater tendency to begin words with (voiceless) **s**, while in peripheral GCY the corresponding words begin with **c**, though many words begin with **c** in core GCY, and in some areas of peripheral GCY some words begin with **s**. Some examples are: core GCY **sugtu-**, peripheral GCY **cugtu-** 'to be tall'; core GCY **sagte-**, peripheral GCY **cagte-** 'to scatter'; and core GCY **sagiq**, peripheral GCY **cagiq** 'flounder, sole'. Furthermore, several words begin with **ell** in core GCY and with **cell** in peripheral GCY. By comparison with other Central Yup'ik dialects and other Eskimo languages, the core GCY pattern with regard to these words can be seen as innovative. The words in question are the following:

core GCY	peripheral GCY	English translation
ella	cella	weather, awareness, world
ellur-	cellur-	to slide down
elli-	celli-	to whet
elleg-	celleg-	to be thick

In addition, core GCY forms the endings of the *Second contemporative* verb mood endings and the *Consequential* verb mood endings somewhat differently than does peripheral GCY.⁵⁵ Thus core GCY says **ayainanermni** and **ayiima** where peripheral GCY says **ayagnginanemni** and **ayagngama** for 'while I was going' and 'because I left', respectively.

Within peripheral GCY, one subdialect requires special mention. Some speakers in Mountain Village, Pilot Station, and Marshall on the Yukon begin with voiceless **s** all words that elsewhere begin with **y**. *In this dictionary this is treated as a pronunciation feature rather than as something requiring a different spelling of those words for that area.* The words in question are listed only with initial **y** and we give the rule for that Yukon area: Initial **y** is pronounced as voiceless **s**. Thus, for those speakers the word **yaani** 'over there' is pronounced as if it were spelled **saani**.

Norton Sound, Hooper Bay–Chevak, and Nunivak Island: NS, HBC, NUN

Lexical differences between NS, HBC, NUN, and GCY are reflected in the dictionary listings; there are, however, patterns whereby the dialects NS, HBC, and NUN are linked with one another and with other Eskimo languages, and these patterns are summarized below. Some of the phonological differences between Central Yup'ik dialects entail different spellings of affected words. For example, NS has (voiced) **s** in some places where GCY has **y**, and this is reflected in our listing of those words with both spellings. On the other hand, there are phonological differences that entail only a change in pronunciation and not in spelling, similar to the situation of those Yukon

⁵⁵ See *Practical Grammar of ... Yup'ik*, pp. 278 and 287 for the Consequential, and pp. 306 and 319 for the Second Contemporative.

speakers who pronounce initial *y* as voiceless *s*. This kind of phonological difference between dialects is not revealed in the dictionary listing, but where it occurs for NS, HBC, and NUN, it is summarized below (as are the differences that do entail different spellings).

Norton Sound: NS

The Norton Sound dialect can be broken into two subdialects (this classification is still tentative). NSU (where U stands for Unaliq, the Yup'ik name of this subdialect) is spoken by the few Yup'ik speakers living in Golovin, Elim, and Unalakleet (the majority of the Eskimo speakers in that area speak Inupiaq). NSK (where K stands for Kotlik) is spoken in Kotlik, although it was probably more widespread in the past. The village of Stebbins, although in the Norton Sound area, is mainly GCY because it was settled from elsewhere; St. Michael is also not NS.

1)⁵⁶ Lexicon: As one might expect from geography, NS (especially NSU) has some words that have cognates in Inupiaq and/or Siberian Yupik and that are not found elsewhere in Central Yup'ik. Examples are **macaq** 'sun', also in Seward Peninsula Inupiaq (and also Sugpiaq); **cikik** 'ground squirrel', also in Inupiaq and Siberian Yupik; **aqelqaq** 'stranger, visitor', also in Siberian Yupik; and **nengsuq** 'grandmother', also in Siberian Yupik. There are also a number of loan words from Inupiaq in NSU, such as **aaRiga'ar**- 'to be good' and **aakaq** 'mother'.

NSU uses the prefix **ta-** or **tas-** for emphasis or repeated reference (anaphora) with any demonstrative (not just **una** and **man'a** as elsewhere in Central Yup'ik), as do Siberian Yupik and Inupiaq. See Appendix 3. NSK, however, essentially repeats part of the demonstrative. So while NSU has **tasiani** for an anaphoric form from **yaani** 'there', NSK has **ya-yaani**.

2) *Lenis (or loose) vs. fortis (or tight) fricatives*: The NS pattern for the occurrence of lenis and fortis versions of *v*, *y*, *s*, and *l* differs from that of GCY, and there is a slight difference between NSK and NSU in this respect.⁵⁷ In NSU, with the exception of subpatterns described below, these fricatives will be lenis if and only if they are intervocalic and ungeminated. Thus NSU has **tuyek** 'shoulder' while GCY has **tusek**. However, in NSU an intervocalic fricative is fortis if it begins a heavy syllable. Thus NSU has **ikasuutut** 'they are helping each other', while GCY has **ikayuutut**. Also, in NSU, a fricative following a consonant and following an unstressed syllable is lenis. Thus NSU has **atraryugtuq** 'he wants to go down', just as in GCY; however, NSU has **mayursugtuq** 'he wants to go up' (GCY **mayuryugtuq**) and **atransuumiitug** 'he doesn't want to go up' (GCY **atraryuumiitug**). The reason for the NSU use of fortis fricatives in the two latter cases is that the preceding syllable has rhythmic stress in the first case and secondary stress in the second case. The NSK pattern has not been fully studied, but it seems to differ from the NSU pattern mainly in that in NSK, if these fricatives follow a stressed vowel, they are fortis even if not beginning a heavy syllable. Thus NSK has **pingasun** 'three' while NSU, like GCY, has **pingayun**.

3) *Treatment of w*: The letter **w** represents a voiced labialized front velar fricative (lenis in word-initial position) like English *w* in NS (as it does in HBC), while in GCY it is a voiceless labialized front velar fricative. Thus in NS **wii** 'I, me' and **ui** 'husband' are homophones (that is, they sound alike).

4) *ar-deletion*: The NSK pattern of **ar**-deletion appears to be like that of HBC (q.v.). However, in NSU there is no **ar**-deletion except in the postbase **-(g/t)ur(ar)-** 'to keepV-ing, to V leisurely'.⁵⁸ The pattern of **ar**-deletion with this postbase is similar but not identical to that in HBC. The **ar** is not fully deleted if it follows a syllable with a rhythmically lengthened vowel or if it follows a heavy syllable. Instead, **ar** changes to **e** if followed by a voiced

⁵⁶ These numbers are keys to discussions of HBC and NUN treatments of the same topics. They should serve to allow the reader to compare NS patterns with the corresponding patterns in HBC and NUN.

⁵⁷ Lenis *v* sounds like English *w*. Lenis *y/s* is *y*; fortis *y/s* is *s* (English *z*). Lenis *l* sounds like English *l*; fortis *l* is made with the tongue higher than with lenis *l* and with more friction, so that one feels an actual buzzing against the teeth. The GCY pattern is described in an appendix to *Yup'ik Eskimo Grammar* (Reed et al., 1977), p. 317. To summarize the GCY pattern, lenis *v* occurs when this fricative is underlyingly ungeminated and between prime vowels, and lenis *y/s* occurs when this fricative is underlyingly ungeminated and between prime vowels or after a consonant. GCY does not distinguish lenis and fortis *l*.

⁵⁸ There is also evidence of NSU **ar**-deletion in several other postbases, but the deletion does not occur as an active process with those postbases; rather, it only leaves its effect on the rhythmic stress pattern.

consonant, and to **er** (with the preceding **r** devoiced) if followed by a voiceless consonant. Thus, from underlying **caliurarluni** NSU has **caliureluni** ‘working leisurely’ (HBC has the same form, but GCY has **caliurluni** because of complete **ar**-deletion). From underlying **caliurartua** NSU has **caliurrertua** ‘I am leisurely working’ (HBC **caliurretua**, GCY **caliurtua**).⁵⁹

5) *Vowel length modification (rhythmic pattern and compression)*: NS as a whole differs from the rest of Central Yup’ik in having a different pattern of rhythmic stress (and consequently of rhythmic length). The standard Central Yup’ik pattern of *stress retraction*⁶⁰ does not apply to NS. Thus, while elsewhere in Central Yup’ik one gets **alíkénritâqa** ‘I do not fear it’ with stress retracted from the open syllable **ri** to the closed syllable **ken**, in NS stress retraction does not occur and one gets **alíkenrîtaqa**. One who is familiar only with the standard Central Yup’ik stress pattern may want to spell the NS version of this word **alikenriitaqa**; however, such a spelling would imply secondary stress⁶¹ on the syllable **ken**. Thus, NS words are spelled following the standard rules, and when the general reader encounters an NS word not found elsewhere, such as **pirtuqcîraq** ‘otter’, he should bear in mind that the syllable **ci** has rhythmic length in the NS pronunciation of this word: **pirtuqcîraq**. Note that the NS pattern of rhythmic stress is midway between the standard Central Yup’ik pattern and the Siberian Yupik pattern. Like the standard Central Yup’ik pattern and unlike Siberian Yupik, NS has initial closed syllable stress, but like Siberian Yupik and unlike the standard Central Yup’ik pattern, NS does not have stress retraction.

In NSK an **e** subject to rhythmic stress is deleted (if possible), as elsewhere in Central Yup’ik, but in NSU an **e** subject to rhythmic stress is retained and the following consonant is (automatically) geminated.⁶² Thus NSU preserves the form **qánrutékaqa** ‘I spoke about it’ with the **k** automatically geminated, while GCY deletes the **e**, giving **qánrútkaq**.

A consequence of the NSU retention of stressed **e** is that a number of dictionary listings must be presented in an NSU version with stressed **e** as well as in a version without this **e** for the rest of Central Yup’ik. The list below gives all such entries:

<i>NSU</i>	<i>Central Yup’ik minus NSU</i>	<i>English translation</i>
acelliq	atliq, acliq	saucer; cellar
alleqaq	alqaq, al’qaq	older sister
atekuk, ateguk	atkuk	parka
illequq	ilquq, il’quq	brain
ineqe-	inqe-	to coo to a baby
itegaq	it’gaq	foot
kapeciq	kapciq	fish scale
keneke-	kenke-	to love
perete-	perte-	to bend
petenge-	pet’nge-	to spring off

⁵⁹ For the GCY pattern of **ar**-deletion see above and see *Practical Grammar of ... Yup’ik*, pp. 50, 173, 187, and 291. In GCY, **ar** (or rather **aq**) which is eligible for deletion will be deleted at the end of a word, so that, e.g., underlying **qayacuaraq** becomes **qayacuar** ‘little kayak’. **ar**, which is eligible for deletion, will be deleted if followed by a consonant-initial, consonant-retaining suffix, so that, e.g., underlying **caliurartuq** becomes **caliurtuq** ‘he keeps on working’. **ar**-deletion following a light syllable often results in a disturbance to the usual pattern of rhythmic stress (see the uses of the apostrophe in the section of this introduction on orthography, where the examples for uses (3) and (4) show the effects of **ar**-deletion on stress).

⁶⁰ See the remarks on stress retraction in the section on Phonology and Orthography, of this introduction.

⁶¹ See the remarks secondary stress in the section on Phonology and Orthography, of this introduction.

⁶² See *Practical Grammar of ... Yup’ik*, pp. 12 and 36 for details of the standard Central Yup’ik (that is, all Central Yup’ik dialects except NSU) treatment of these **es**.

qacelli-	qatli-	to sting
upenerkaq	up'nerkaq	spring (season)

Like GCY, neither NSK nor NSU has any process of *compression* whereby a heavy syllable sounds short under certain conditions (see the sections on HBC and NUN for more on this subject).

6) *Word-final phenomena*: Verb forms that in GCY end in **u** not preceded by **k** have final **ng** after the **u** in NSU. Thus, where GCY has **merr'u** 'drink it!', NSU has **merr'ung**; and where GCY has **nerkuniu** 'if he eats it', NSU has **nerkuniung**. In this respect NSU is like Inupiaq. Note that HBC has voiceless **g** in some of the same endings where NSU has **ng** following **u**.

Hooper Bay and Chevak: HBC

Though close enough to be considered a single dialect here, these two villages differ slightly from each other, perhaps most notably in that Hooper Bay, like GCY, has **yuk** 'person', while Chevak has **cuk**. This is why Chevak people refer to themselves as **Cup'ik** but Hooper Bay people refer to themselves as **Yup'ik** (as speakers of the NS and GCY dialects do).

1) *Lexicon*: Lexically, HBC differs from GCY to about the same extent that NS does, but not so much as NUN does. HBC and NUN share some lexical items that are not found elsewhere in Central Yup'ik.

2) *Lenis vs. fortis fricatives*: The HBC pattern for **v** and **y/s** differs from that elsewhere in Central Yup'ik in that HBC has only fortis **v** and only lenis **y/s**, i.e., only **y** and only lenis **l**. However, even the fortis **v** and the **y** range somewhat between fortis and lenis in HBC, depending on their positions. In comparison to the rest of Central Yup'ik, the lack of **s** and of a truly lenis **v** is striking.⁶³ HBC thus has **qaygiq** 'kashim' while the rest of Central Yup'ik has **qasgiq**, and for HBC the **v** of **qavartuq** 'he is asleep' is fortis, whereas it is lenis elsewhere in Central Yup'ik. However, the intervocalic [w] in the certain demonstrative adverbs arising from **uḡ** in the corresponding demonstrative pronouns is lenis in HBC as in GCY. Thus, while for GCY the adverb can be written with **v**, thus **pavani** 'back there', from pronoun **paḡna**, 'the one back there', writing it with **v** may be misleading for speakers of HBC, who prefer to write **paḡgani**.

3) *Treatment of w*: HBC, like NS, has a voiced labialized lenis front velar fricative represented by **w**, while in GCY this letter stands for a voiceless fricative. Consequently, in HBC **wii** 'I, me' and **ui** 'husband' are homophones.

4) *ar-deletion*: The HBC process of *ar*-deletion is different from that of GCY,⁶⁴ but it is like that of NSK. The HBC pattern differs from the GCY pattern in the following ways:

(i) In HBC, *ar*-deletion does not occur at the end of a word, unlike in GCY, so that HBC has **qayacuaraq** or **qayakcuaraq** 'little kayak' while GCY has **qayacuar**.

(ii) In HBC, **ar** is changed to **e** after **Cr** while in GCY it remains **ar**, so that HBC has **atreluni** 'going down' while GCY preserves the underlying form as the surface form, **atrarluni**.

(iii) In HBC **ar** is changed to **e** after **Vr** where **V** is rhythmically lengthened or is part of a heavy syllable, while in GCY **ar** is deleted under these circumstances, so that from underlying **tuntuqurarluni** 'continuing to catch caribou' and **egaurarluni** 'continuing to cook', HBC has **tuntuqureluni** and **egaureluni** while GCY has **tuntuqu'urluni** and **egaurarluni**. Furthermore, in HBC, if the consonant following the **ar** is voiceless, then the **r** preceding the **e** is devoiced, so that HBC has **egaurretua** 'I continue to cook'. (However, HBC *ar*-deletion will follow the same pattern as GCY if the **ar** is followed by **C₁VC₂V** where **C₁** is a stop.)

5) *Vowel length modification (rhythmic pattern and compression)*: HBC follows the standard Central Yup'ik pattern

⁶³ However, in HBC lenis **v** can arise from an intervocalic ungeminated **ug** as in the demonstrative adverb **avani** 'over there', in which the **v** is lenis even for HBC, as it comes from the **uḡ** in **aḡna** 'the one over there'. HBC speakers may prefer the spelling **aḡgani** to **avani**.

⁶⁴ For the GCY pattern of *ar*-deletion see *Practical Grammar of ... Yup'ik*, pp. 50, 173, 87, and 291.

for rhythmic stress with stress retraction (unlike NS). In HBC stressed **e** is deleted even between two like consonants, resulting in a cluster of these like consonants, the first of which is released. Thus HBC has **tum'mi** 'in the footprint' (the apostrophe indicates the release of the consonant), where elsewhere the word is **tumemi** with the second **m** automatically geminated.

In HBC a heavy closed nonfinal syllable is *compressed*, that is, pronounced short but with stress. This phenomenon of vowel compression is not present in GCY or NS, but it does occur in NUN and in Sugpiaq. Consider the words **angyatgun** 'with the boats' and **angyaatgun** 'with their boat'. In GCY and NS, the doubled **a** in the second word is longer than the single **a** in the first word; in HBC, since the doubled **a** is in a closed nonfinal syllable, it has the same phonetic length as the single **a** in the first word, but in the second word, the second syllable is stressed as well as the first syllable, while in the first word, only the first syllable is stressed. When a similar situation arises after an unstressed syllable, a compressed syllable is distinguishable from an underlyingly short but stressed syllable by the so-called *secondary stress* (see the remarks on this in the "Phonology and Orthography" below) on the preceding syllable. Thus **áqngirtátnga** ' (why) did they hurt me' is distinguishable from **áqngirtáatnga** 'they hurt me' by the secondary stress on **ngir** in the second word (even in the first word the syllable **tat** is stressed, so the stress on the compressed syllable **taat** in the second word is not the distinguishing feature). However, the words **unra** 'his armpit' (from **uneq** 'armpit') and **uunra** 'his burn' (from **uuneq** 'burn') are indistinguishable in HBC, because in the case of **unra**, the first syllable is stressed inherently, being initial and closed, so HBC compression leads to a situation where such words sometimes do not contrast with regard to stress.

It is our policy in this dictionary to write a compressed vowel double if, without having to explore outside the dialect in question, there is a way to determine that the vowel is underlyingly double. Thus for HBC both **angyaatgun** 'with their boat' and **uunra** 'his burn' would be written with double vowels because in the case of **angyaatgun** one can hear the extra stress (i.e., this word must be written differently from **angyatgun** because they sound different), and in the case of **uunra** one can tell from the unpossessed form that the **u** is underlyingly double (i.e., even though this word in HBC sounds exactly like **unra**, they are written differently). On the other hand, if the vowel appears to be a single vowel and there is no way to tell underlying length without referring to forms outside the dialect area, a vowel is written single. Thus, for HBC (and NUN, as we shall see), **cisquq** is listed for 'knee', because there is no way, without checking other dialects, to tell that the **i** comes from an underlyingly double but compressed vowel (as seen in the GCY form, **ciisquq**).

A cluster of two unlike vowels is also eligible for compression in HBC, and when **Vug** or **Vur** is compressed in HBC, the result is the labialized configuration **Vuḡ** or **Vuṛ**. Thus from **auk** 'blood' comes GCY **augmi** 'in the blood' but HBC **aḡmi** (since the process in question is automatic for HBC, this word can be written **augmi** for HBC as well as for GCY).

6) *Word-final phenomena*: The GCY endings **-mek/-nek**, **-nuk**, and **-nak**, as in **camek** 'of what', **caciqseñuk** 'what will we₂ do' and **pivkenak** 'don't!', have the HBC forms **-meng/-neng**, **-nung**, and **-nang**; thus in HBC those words are **cameng**, **caciqsining**, **pivkenang**. In this respect HBC is similar to Siberian Yupik and Diomedean Inupiaq. Note that HBC does have words and endings (where **mV** or **nV** does not precede the **k**) terminating in **k** — for example, **acak** 'aunt', **irniakkek** 'their₂ children' — so it is not simply the case that GCY word-final **k** always becomes **ng** in HBC.

Furthermore, GCY verb endings with final **u** preceded by two vowels have voiceless **g** following them in HBC; thus HBC has **nerkuniug** 'if he eats' corresponding to GCY **nerkuniu** (compare the case of NSU **ng** in regard to this phenomenon).

7) *Treatment of initial e*: Some of the words that begin with a weak initial **e** in GCY and NS have in HBC an initial **e** that is not weak.⁶⁵ Thus, the word for 'water' has weak initial **e** in all three of these dialects, as all have **meq'a** 'my water', but the word for 'house' has an initial **e** that is weak in GCY and NS, but not in HBC, so that GCY and NS have **nek'a** 'my house' while HBC has **enka**.

HBC retains initial **k** on a number of words that in GCY begin with **en** or **eng**. On several other words that in GCY begin with **el** or **en**, HBC either retains or adds initial **n**.⁶⁶ This is a trait that HBC shares with NUN. The

⁶⁵ For the meaning of *weak initial e* and a complete list by dialect of words with weak initial **e** see the relevant section of this introduction, above.

⁶⁶ One can say "retain", in the case of **k**, by comparisons with other Eskimo languages, as the list shows. Also, it should be pointed out

following is a list of all such words:

<i>Sugpiaq</i>	<i>GCY</i>	<i>NUN</i>	<i>HBC</i>	<i>NS</i>	<i>Siberian Yupik</i>	<i>Inupiaq</i>	<i>English</i>
kente-	ente-	kente-	kente-	ente-	kente-	tinit-	tide ebbs
kengla/engla	[e]ngla	kengla	kengla	[e]ngla	kenla	killi*	border
kenir-	enir-	kenir-	kenir-	niir-	kenigh-**	—	to point
kenegte-	negte-	kenegte-	kenegte-	negte-	kenegte-	—	to press
kenu-	enu(ur)-	kenu(ur)-	kenu(ur)-	enu-	kenu-	tinu-	to push
englar-	[e]nglar-	englar-	nenglar-	[e]nglar-	nenglagh-	iglaq-	to laugh
neneq/naneq	eneq	neneq	neneq	naneq	—	—	
leq	[e]leq	neleq	neleq	naleq	leq	niliq	fart
elte-	elte-	nelte-	nelte-	elte-	elte-	—	to leak air
engluq	[e]nglu, enlu	—	—	[e]nglu	nenglu	iglu	house, sod house, beaver house

* Inupiaq **ll** represents geminated voiced **l**.

** Siberian Yupik **gh** is equivalent to Central Yup'ik **r**.

8) *Initial y vs. initial c*: Words that in GCY have initial **y** followed by a single vowel have initial **c** in HBC (exceptions are **yurar-** ‘to Eskimo-dance’ and **yuk** ‘person’, the latter being an exception in Hooper Bay but not in Chevak). Examples are GCY **yaquq** ‘wing’, HBC **caquq**; GCY **yukutaq** ‘moisture’, HBC **cukutaq**. In this respect HBC is like NUN. Note that when two vowels follow an initial **y** in a GCY base, HBC also has initial **y**. Thus both HBC and GCY have **yaani** ‘over there’ and **yuuluni** ‘getting out’ (indicating historically ***iani** and ***iuluni**, for which there is other evidence as well). Note, however, that to GCY **yuuluni** ‘being a person’ corresponds Chevak **cuuluni**, because it is from **yuk/cuk** ‘person’, which has a single vowel after the initial consonant.

9) *Retention of intervocalic v and y*: HBC retains the intervocalic fricatives **v** and **y**, which have been dropped from certain words in GCY and NS.⁶⁷ In this respect HBC is like NUN and Siberian Yupik. The following is a list of all such words:

<i>GCY (and NS)</i>	<i>HBC (and NUN)</i>	<i>English translation</i>
---------------------	----------------------	----------------------------

that GCY does have some words which start with **k** or **n** followed by **e** and a nasal, for example **keneq** ‘fire’ and **nenge-** ‘to stretch’.

⁶⁷ One can say “retains” rather than “inserts” on the basis of comparison with other Eskimo languages.

ciu	civu	front, bow
ciur-	civur-	to wring
kiarte-	kiyarte-	to look around
kii-	keyir-	alone, only
natquigte-	natquvigte-	to blow along ground (of snow)
nuak	nuvak	saliva
nuuk	nuvuk	point of land
qia-	qeya-	to cry
qiu-	qeyu-	to be bluish
uive-	uyive-	to turn around
yualu	ivalu	sinew
yuar-	ivar-	to search for
yuarun	ivarun	song

10) **i vs. e between c and an apical**: Words that in GCY have **ce** followed by an apical (see consonant chart) generally have **ci** in this position in HBC.⁶⁸ For example, GCY **cetaman** ‘four’, **ceña** ‘shore’, **ayagcetaa** ‘he sent him’, **cella/ella** ‘weather, awareness, world’ correspond to HBC **citaman**, **cina**, **ayagcittaa**, **cilla**. HBC and EG (see below) are the only dialects of Central Yup’ik in which this happens (nor does it occur in Siberian Yupik or Sugpiaq). In this respect HBC and EG are similar to Naukan Yupik, where the cognates of these words have **si**, and Inupiaq, where the cognates of these words have the “strong **i**” (i.e., palatalizing **i** that comes from Proto-Eskimo **i** rather than from **e**).

Nunivak Island: NUN

This dialect is now spoken only at the village of Mekoryuk on Nunivak Island. Both lexically and phonologically, NUN differs more from GCY than do either HBC or NS. In the past, NUN has been called Cux and considered a language distinct from Central Yup’ik; however, it is a dialect for the most part mutually intelligible with the rest of Central Yup’ik, despite its significant differences.

1) *Lexicon*: Lexically, NUN is the most divergent dialect of Central Yup’ik, though it and HBC share some words not found elsewhere in Central Yup’ik. NUN has many words found nowhere else in Eskimo, and some words found also in Sugpiaq but not elsewhere in Eskimo. Thus, lexically as well as in other respects (see below), there appear to be links between NUN and Sugpiaq.

2) *Lenis vs. fortis fricatives*: In NUN the lenis versions of **v**, **y/s**, and **l** occur between vowels (whether prime or **e**), and after consonants, while fortis versions appear before consonants only. Thus, the fricatives are lenis in **avek** ‘half’, **tuyek** ‘shoulder’, **ulu** ‘tongue’, **nervik** ‘table’, **neryugtuq** ‘he wants to eat’ and **nerluk** ‘let us₂ eat’, but fortis in **avga** ‘half of it’, **tusga** ‘his shoulder’, and **caqulget** ‘angels’.

3) *Treatment of w*: NUN has a labialized front velar stop where GCY has a labialized front velar voiceless fricative and HBC and NS have a labialized front velar voiced fricative. Thus, for NUN the word **wii** ‘I, me’ begins with a stop consonant not found elsewhere in Central Yup’ik. However, in this dictionary we do not introduce a new symbol or digraph for this; we do not write ***kwii** for NUN.

4) *ar-deletion*: The NUN pattern of **ar**-deletion is more like that of GCY than that of HBC and NS. The only way in which the NUN pattern differs from the GCY pattern is that in NUN, as in HBC, **ar** is deleted after **Cr** as well as after **Vr**. However, in NUN, when **ar** is deleted after **Cr**, the resulting consonant cluster is broken with an **e** between the first and second consonants, and the first consonant is geminated, while in HBC the **ar** is replaced by **e**, so that a

⁶⁸ Under certain circumstances not yet fully investigated, GCY **ce** corresponds to HBC **te** rather than **ci**.

consonant cluster does not arise. For example, given the underlying form **atrarluni** ‘going down’, which is also the GCY surface form, NUN has **at’erluni** while HBC has **atreluni**.⁶⁹

5) *Vowel length modification (rhythmic pattern and compression)*: The rhythmic pattern of NUN is like that of GCY and HBC. NUN, however, has a process of vowel compression similar to that of HBC, but more far-reaching. In NUN any heavy closed syllable is pronounced phonetically short, as is any heavy word-final open syllable (while in HBC, compression applies only to non-word-final closed syllables). Furthermore, unlike HBC, compression in NUN in a syllable following a stressed syllable leaves no distinction between a single vowel and a compressed double vowel.⁷⁰ Thus for NUN **angyatgun** ‘with the boats’ sounds the same as **angyaatgun** ‘with their boat’, and **qayaqa** ‘my kayak’ sounds the same as **qayaqaa** ‘it is his kayak’. We follow the same spelling policy as with HBC (see corresponding section under HBC): If there is a way of discovering an underlyingly heavy but compressed vowel without having to make comparisons with other dialects, then we write that vowel double.

In NUN, compression does not occur if the closed syllable in question was followed by **ar** that has been deleted. Thus from underlying **pinircaarartuq** comes **pinircaa’rtuq** ‘he is trying to be good’, where the apostrophe is used to indicate that compression does not occur.

6) *Word-final phenomena*: NUN ends words with voiceless fricatives rather than with front or back velar stops. This is a trait NUN shares with the extinct Siberian Yupik Sirenik language and with Aleut. In this dictionary we have not spelled NUN words with final voiceless fricatives (**g** or **r**), but rather give the following pronunciation rule for NUN: word-final **k** is pronounced as voiceless **g**, and word-final **q** is pronounced as voiceless **r**. Thus **arnaq** ‘woman’ and **arnak** ‘two women’ are pronounced in NUN as if they were spelled **arnar** and **arnag**.

7) *Treatment of initial e*: Like HBC, NUN has initial **k** or **n** on a number of words that begin with **e** in GCY (see the corresponding section on HBC for complete details). NUN has no weak initial **e** at all.⁷¹ Thus, while GCY has **nek’a** ‘my house’, NUN like HBC has **enka**, and while both GCY and HBC have **meq’a** ‘my water’, NUN has **emqa**.

8) *Initial y vs. initial c*: Like HBC, NUN has initial **c** on words that in GCY have initial **y** followed by a vowel and a consonant. The only exceptions found so far for NUN are **yungcarista** ‘doctor’ and **yuguaq** ‘ball’, at least the first of which is probably a recent loan from GCY. (The HBC exception **yurar-** ‘to dance’ is not used in NUN.)

9) *Retention of intervocalic v and y*: Like HBC, NUN keeps certain **v** and **y** between vowels (see the discussion at the corresponding section for HBC).

10) *i vs. e between c and an apical*: Like GCY and NS, and unlike HBC, NUN has **ce** before an apical rather than **ci** (see the discussion at the corresponding section for HBC).

11) *n in place of l*: NUN (and HBC to some extent, and EG) has **l** in certain words in place of **n**, especially word initially. Thus NUN has **leqleq** ‘white-fronted goose’, **legcik** ‘gaff’, **luussiq** ‘knife’, **naanguartuq** ‘he’s playing with toys’, and **cacugnilarquq** ‘it smells of something’, where GCY has **neqleq**, **negcik**, **nuussiq**, **laanguartuq**, and **cacugninarquq**.

12) *Vowel assimilation*: NUN pronounces **ai** as if it were **aa** unless the **ai** is part of an ending. In some cases one can determine whether an apparent **aa** comes from **ai** without depending upon comparisons with other dialects, while in other cases this is not possible. Our policy in this dictionary is that if one can determine within the NUN dialect that an **aa** (even if compressed) comes from **ai**, then it is written **ai**; otherwise, it is written **aa**. Thus the GCY base **tai-** ‘to come’ is listed as **taa-** for NUN, since one cannot tell from any occurring NUN form that the **aa** comes from **ai**; on the other hand, the NUN word that sounds like **cukaatut** ‘they are slow’ is written even for NUN as **cukaitut**, because one can tell by comparison of forms within NUN that the **aa** in this word comes from **ai**. This policy necessitates the special pronunciation rule for NUN: **ai** is pronounced **aa** except in an ending.⁷²

12) *Devoicing of geminated fricatives*: NUN devoices geminated fricatives not followed by **e**. This is another

⁶⁹ In GCY **ar**-deletion after **Cr** occurs only with a few postbases and the endings of the concessive mood. See *Practical Grammar of ... Yup’ik*, pp. 292 and 304.

⁷⁰ There may be some speakers of NUN for whom this is not entirely true.

⁷¹ For a complete listing of words in GCY, HBC, and NS with weak initial **e** see the section of this introduction on initial **e**.

⁷² Note that there is also a small group of speakers in the Togiak area who pronounce **ai** as **aa**.

important trait that NUN shares with some dialects of Sugpiaq. This feature of NUN phonology is accommodated by the following pronunciation rule for NUN: any fricative, even if written single, is to be pronounced voiceless if it is geminated but not followed by **e**. Thus the fricatives in the following words are to be pronounced voiceless in NUN: **uluaq** ‘woman’s knife’ (**l** pronounced as **ll**), **kuv’uq** ‘it spilled’ (**v** pronounced as **vv**), **qayaani** ‘in his kayak’ (where voiceless **y** is pronounced as **ss**). However, the fricatives are voiced for NUN in the words **nav’ertuq** ‘he is borrowing’, **anel’ertuq** ‘he went downriver’, and **cas’er** ‘mouse’, where the geminated fricatives are followed by **e**. These three words arise through **ar**-deletion from underlying **navrartuq**, **anelrartuq**, and **casraq**. Under such circumstances, the fricative remains voiced after **ar**-deletion, and is fortis because it is preconsonantal in the underlying form.

13. *Gemination at end of utterance*: In NUN at the end of an utterance a consonant is geminated if it is preceded by a single, not rhythmically stressed vowel and followed by V# or VC#. Thus for NUN, the second **n** in utterance-final **nuna** ‘land’ is geminated. This being an automatic process, it is not marked in any way in the dictionary. Furthermore, this rule applies after the rule for devoicing geminated fricatives, so that, for example, the **l** in utterance-final **ulu** ‘tongue’ is geminated but not devoiced, and it is lenis, unlike the geminated **l** in **anel’ertuq** as discussed above.

For information on NUN beyond what is given, see the introduction to the *Cup’ig Eskimo Dictionary* (Amos and Amos, 2003) and the present writer’s article “The participial oblique, a verb mood found only in Nunivak Central Yup’ik and in Siberian Yupik” in *Etudes/Inuit/Studies*, 2006, 30(1): 135–156.⁷³

Very important: The balance between spelling and pronunciation rules has been arranged in such a way that the burden falls most heavily on special pronunciation rules for NUN in this book. This policy reduces as much as possible the need to enter a word twice in the dictionary. Thus, corresponding to the GCY pronunciation of **uluaq** ‘woman’s knife’, the NUN pronunciation sounds as if it were written **ulluar**, but this need not be written in this form in the dictionary because special pronunciation rules for NUN allow one to determine the NUN pronunciation from the standard spelling. The same is true to a lesser extent for HBC. However, where it is unavoidable, words have been entered twice; for example, ‘knee’ is listed as **ciisquq** for GCY and as **cisquq** for NUN and HBC, with cross-references. Note that the *Cup’ig Eskimo Dictionary* (Amos and Amos, 2003) and school materials prepared for NUN use an orthography closer to the phonetic surface so that one indeed writes **ulluar** and **kwatua** ‘now’ in that orthography, but to avoid conflicts here that orthography is not used (except to an extent in examples from texts) even for words restricted to NUN (and even for those noted as coming from the Amoses’ dictionary by “NUN(A)”). The *Cup’ig Eskimo Dictionary* should be consulted concerning any question on NUN pronunciation of a word. Note, however, that quoted full-sentence or phrase examples in this book are spelled more or less as they are in NUN school materials or in the *Cup’ig Eskimo Dictionary* (except insofar as that spelling would conflict with other spelling here).

Egegik: EG

Nothing was known by the writer of these lines about the EG dialect in 1984 when the first edition of this dictionary was published. Shortly after that, he learned that Egegik, and to a certain extent nearby villages such as Naknek, had a dialect quite divergent from GCY. By the late 1980s it was spoken by a minority there and only elderly speakers, the majority speaking GCY or Sugpiaq/Alutiiq (or English only).

On both lexical and phonological grounds the EG dialect is very much like the historical Aglurmiut dialect.⁷⁴

⁷³ It has not been determined whether the mood discussed in that article, a hallmark of the NUN dialect, is also present in the EG dialect (or its historical form, Aglurmiut), which shares so many other features with NUN (see below).

⁷⁴ See *Yup’ik Dialect Atlas and Study* (Jacobson 1998), pp. xv–xvii., and also the article “Eskimo and Aleut Languages” by Anthony C. Woodbury in *Handbook of North American Indians*, Vol. 3 (Sturtevant and Damas, eds. 1984) pp. 52–53. The only early textual evidence of Aglurmiut, *Sbornik Tserkovnykh Pesnopeniy i Molitvocloviy na Aglegmyutsko-Kuskokvimskom Narechiiy* (Russian Orthodox Church, 1896) and *Three Liturgical Gospel Readings* (Orlov, 1897), clearly displays the diagnostic traits for EG. Thus in these texts one sees *cilliini* (Russian Orthodox Church 1896:45 & 2006:34) rather than *elliini* or *celliini*, as in GCY; *tarut* (Russian Orthodox Church 1896:55 & 2006:36) rather than *yuut*, as in GCY; *caqulekcuarauluni* (Orlov 1897:3), rather than *yaqulekcuarauluni*, as in GCY; and also “*kwangkuta*”

Thus, a number of EG words found only on old word lists for Aglurmiut, for example **aiviqaq** ‘crane’, **civitriq** ‘wolf’, **palurngalriaraq** ‘mink, marten’, and **aavaq** ‘ghost’, which are only EG (and not Sugpiaq). Some are on old Aglurmiut lists and have cognates in Sugpiaq, for example **aaquyaq** ‘river otter’ and **kuumaqiaq** ‘eagle’.

1) *Lexicon*: As one might expect from geography, EG has some words with cognates in Sugpiaq and not found elsewhere in Central Yup’ik or only in other divergent dialects. For example, **kevgaluk** ‘muskrat’, which is found in Central Yup’ik far to the north in NSU, and has a cognate in Koniag Sugpiaq, [kufxaluk] or [ku^wγ^waluk]. The EG form is not a loan from Sugpiaq as that language lacks [v], nor is it a loan in the other direction (most probably). However, there are loans from Sugpiaq or shared words with Sugpiaq, for example, **tunglar-** ‘to harden’, **qupalaaq** ‘robin’, **ucinguq** ‘old lady’, and **aalalaaq** ‘flounder’. There are quite a few EG words also in NUN but not GCY, for example **aaluugiq** ‘seagull’, and **puqlaneq** ‘sun’, and EG words in various other divergent dialects of Central Yup’ik, for example, **tavigte-** ‘to braid’ (also NUN and HBC). Some words are (apparently) EG only, for example **cakte-** ‘to be small’.

2) *Lenis vs. fortis fricatives*: The EG pattern is the same as the HBC pattern. Thus, like HBC, EG has **qaygiq** ‘kashim’ and **qavartuq** ‘he is sleeping’ with [v].

3) *Treatment of w*: Like NUN, EG has **w** as a stop, [k^w].⁷⁵

4) *ar-deletion*: The EG pattern is undetermined.

5) *vowel length modification (rhythmic pattern and compression)*: EG follows the standard Central Yupik pattern for rhythmic stress with stress retraction (like the other dialects south of NS). Also, EG does not follow the Sugpiaq pattern.

EG has *compression*, as do HBC, NUN, and, outside of Central Yup’ik, Sugpiaq. Compression in EG applies to closed and open final syllables (unlike HBC, but like NUN and Sugpiaq) as well as nonfinal syllables. Compression in EG leaves a clear residue of stress (unlike NUN, but like HBC and Sugpiaq). In EG underlyingly long closed initial syllables of Russian loan words are not compressed (unlike NUN and HBC, but like Sugpiaq).

6) *Word-final phenomena*: Like the rest of Central Yup’ik, except HBC, EG does not nasalize the final **k** in such ending as **-mek** and **-nek**. Also like the rest of Central Yup’ik except NUN, EG does not affricate final **q** and **k**. Note that alone among Central Yup’ik dialects, EG reduces the **u** in the endings **-mun** and **-put**, saying, for example, **nunamen** ‘to the land’ and **nunapet** ‘our land’ (rather than **nunamun** and **nunaput**). Evidently this EG pattern is borrowed from Sugpiaq.

7) *Treatment of initial e*: Like HBC, NUN, and Sugpiaq, EG has initial **k** or **n** on a number of words that begin with **e** in GCY (see the corresponding section on HBC for details). EG takes a middle path as regards weak initial **e**, saying **enka** (and not **nek’a**) for ‘my house’ like HBC and NUN but not GCY, **etquq** (and not **teq’uq**) for ‘urine’ like NUN but not GCY or HBC, and **mer’a** (and not **emra**) for ‘its water’ or ‘drink!’ like GCY and HBC but not NUN. EG borrows the Sugpiaq pattern for words beginning with **erV** or **qerrV** (or **qurrV**), in GCY saying **erritarluku** or equivalently **rritarluku** for ‘washing it’, **errutaanga** or equivalently **rruutaanga** for ‘I am cold’, and **rrurluni** ‘urinating’ (instead of **eritarluku**, **qerrutaanga**, and **qurruluni** for these).

8) *Initial y vs. initial c*: EG, like NUN and HBC, has initial **c** on words that in GCY have initial **y** followed by a vowel and consonant, thus saying **caquq** ‘wing’ and **cuvrirluku** ‘examining it’, where GCY says **yaquq** and **yuvrirluku**. As regards the familiar shibboleth, EG says neither **yuk** nor **cuk** (nor **suk** or **inuk**) for ‘person’, and neither **yup’ik** (or **yupiaq**) nor **cup’ik** (nor **sugpiaq** or **inupiaq**) for ‘Eskimo’, but rather has its own words, **taru** ‘person’ (which is known from historic Aglurmiut and elsewhere) and **tarupiaq** ‘Eskimo’.

9) *Retention of intervocalis v and y*: Like HBC and NUN, EG keeps certain **v** and **y** between vowels (see the discussion at the corresponding section for HBC).

10) *i vs. e between c and an apical*: EG follows the HBC pattern, differing from the rest of Central Yup’ik, from Sugpiaq and from Siberian Yupik, but similar also to the Naukan Yupik and corresponding to the pattern of Inupiaq. Thus EG has **cina** ‘shore’, **cituk** ‘fingernail or toenail’, and **cilla** ‘world, outside, awareness’, rather than **ceña**, **cetuk**, and **cella** or **ella**.

(Russian Orthodox Church 1896:9 & 2006:8) and “*kwiinga*” Orlov 1897:4) rather than *wangkuta* and *wiinga* as in GCY.

⁷⁵ This in contradiction to the report on p. 152 of *Yup’ik Dialect Atlas and Study* (Jacobson 1998). It now appears that there is some variation in EG in this regard, but that reported now is the basic pattern.

11) **l** in place of **n**: EG, like NUN (and to a lesser extent HBC),⁷⁶ has initial **l** in certain words where elsewhere there is initial **n**, but not always in the same words as NUN. Thus, EG has **lagte-** ‘to trip and fall’, ‘to get snagged’, **laveg-** ‘to break’, **luvak** ‘saliva’, and **luve-** ‘to thread’, where GCY has **nagte-**, **naveg-**, **nuvak** or **nuak**, and **nuve-**.

PHONOLOGY AND ORTHOGRAPHY

General Description of the Yup’ik Writing System

The standard Yup’ik writing system (orthography) uses some of the letters of the English alphabet, though not all of the characters have the same sound values that they have in English. No letters that are not to be found on a standard keyboard are used in this Yup’ik orthography, though two diacritics are used.

For a given dialect area, a written Yup’ik word can be pronounced in only one way.⁷⁷ Pronunciation depends upon the sound values of the individual letters and upon the position of each letter in relation to the other letters of the word. Certain dialects have special pronunciation rules, described in detail in the section on Yup’ik dialects.

Yup’ik Alphabet Chart

Consonants

	<i>labial</i>	<i>apical</i>	<i>front velar</i>	<i>back velar</i>	<i>labialized front velar</i>	<i>labialized back velar</i>
<i>stops</i>	p	t	c	k	q	ᵁk

Vowels

	<i>front</i>	<i>back</i>
<i>high</i>	i	u
		e
<i>low</i>		a

* In the Hooper Bay–Chevak dialect, the Norton Sound dialect and for the villages Tununak and Newtok the voiced labialized front velar fricative, [ɣʷ], is used where [xʷ] is used elsewhere, and for those dialects (and villages) **w** represents this sound (and so for these dialects **ᵁg** and **w** sound the same, though occurring in different positions in a word). Note that

⁷⁶ This occurs here and there in GCY as well.

⁷⁷ The converse is not quite true. Certain words can be spelled in two ways. See below.

in the Nunivak dialects and Egegik dialect the labialized front velar stop [k^w], is occurs word initially where [x^w] or [ɣ^w] occurs in other dialects, but most writers and transcribers will not “stretch” the use of the letter **w** to cover that, instead writing **kw** (see below); so also in the examples from those areas in this dictionary.

Stop Consonants

Stops are the consonants in the first row of the sound chart. When a speaker forms these sounds, the passage of air through the mouth comes to a complete stop. Yup’ik stops are voiceless and (except at the end of a word) unaspirated. That is, Yup’ik stops are like the sounds *p*, *t*, *k* in the English words *spy*, *sty*, *sky*.

- p** Examples of Yup’ik words with **p** are **ipuun** ‘ladle’ and **pikna** ‘the one up there’.
- t** Examples of Yup’ik words with **t** are **tauna** ‘that one’ and **aatat** ‘fathers’.
- c** Yup’ik **c** is similar to the *ch* in English ‘church’, but unaspirated. It is never pronounced as *k* as it is in the English word ‘cat’. Yup’ik examples are **cavun** ‘oar’ and **ciin** ‘why’. When the vowel **e** follows **c**, **c** then has the sound of English *ts* in ‘hits’. Examples of this are **cetaman** ‘four’ and **ceteq** ‘mark’.
- k** Examples of Yup’ik words with **k** are **ukuk** ‘these two’ and **kiak** ‘summer’.
- q** Yup’ik **q** is a stop consonant produced farther back in the mouth than **k**, with the tongue against the soft palate rather than against the hard palate. English does not have this sound. Yup’ik examples are **uquq** ‘oil’ and **qayaq** ‘kayak’.
- ūk** A very few words have labialized (made with rounded lips) **k**. An example is **kaūk’araa** ‘he hit it with a sudden sharp blow’.⁷⁸
- ūq** Also quite rare is labialized **q**. An example is **aitaūq’ertuq** ‘he made a sudden little yawn’.

Fricatives

Fricatives are the consonants in the second and third rows of the sound chart. These are made in the same places in the mouth as the stops in the same columns, except that air is squeezed through the closure rather than being stopped, producing audible friction. Fricatives are continuing sounds, *continuants*, in contrast to the stops. *Voiced fricatives* are those in which the vocal cords vibrate while the sound is made, while in producing *voiceless fricatives* the vocal cords do not vibrate. Except for **w**, voiceless fricatives are indicated in the orthography by doubling the letter used for the corresponding voiced fricative.

- v** **v** next to a consonant or the vowel **e** sounds like English *v*, for example **avga** ‘half of it’ and **avek** ‘half’; while **v** between vowels (other than **e**) generally sounds like English *w*, for example **calivik** ‘workshop’.⁷⁹
- vv** This is the voiceless counterpart of **v** and therefore sounds like English *f*. A Yup’ik example is **kuuvviaq** ‘coffee’.
- l** Yup’ik **l** sounds much like English *l*, but the tongue is held more fortisly so that there is more friction. A Yup’ik example is **ila** ‘part, relative’.
- ll** This is the voiceless counterpart of **l** and is a Yup’ik sound that does not occur in English. It is made by holding the tongue in the position for **l** and allowing air to be blown out the sides between the tongue and the back teeth without allowing the vocal cords to vibrate. Examples are **allaneq** ‘stranger’ and **ulluvak** ‘cheek’. The phonetic

⁷⁸ For the Nunivak and Egegik dialects the labialized front velar stop is usually written as **kw** (see above).

⁷⁹ This is the basic rule for “General” Central Yup’ik (that is, excluding the dialects of Norton Sound, Hooper Bay–Chevak, Nunivak Island, and Egegik). Even within General Central Yup’ik there are subrules according to which certain intervocalic **v**’s have the sound of English *v* rather than English *w*. For more information see p. 317 in *Yup’ik Eskimo Grammar* (Reed et al. 1977). For a description of the pronunciation of **v** in Norton Sound, Hooper Bay–Chevak, Nunivak Island, and Egegik see the section on “Yup’ik Dialects” in this Introduction.

symbol for this sound is [ɬ].

- y** Yup'ik **y** sounds like English *y*. Examples are **yuk** 'person' and **ayii** 'leave!'.
s Yup'ik **s** has the voiced sound (English *z*) of the *s* in the English word 'resemble'. A Yup'ik example is **casit** 'what are you doing?'. Phonetically **s** is [z].⁸⁰
ss This is the voiceless counterpart of Yup'ik **s** and **y**, so **ss** has the same sound in Yup'ik as it does in the English word 'assemble'. A Yup'ik example is **assiituq** 'it is bad'.
g Yup'ik **g** is the voiced fricative counterpart of the Yup'ik stop **k**. It does not occur in English. Yup'ik examples are **igaa** 'he swallowed it' and **negaq** 'snare'. Phonetically **g** is [ɣ].
gg This is the voiceless counterpart of **g**, and it also does not occur in English. Examples are **maaggun** 'this way' and **keggaa** 'it bit him'. Phonetically **gg** is [x].
r Yup'ik **r** is the voiced fricative counterpart of the Yup'ik stop **q**. It does not occur in English. Examples are **iruuq** 'leg' and **arnaq** 'woman'. The symbol **r** was chosen for this sound because of its use for this in older orthographies developed by missionaries who were familiar with European languages, such as French and German, and other Eskimo languages, in which **r** represents this sound. Phonetically **r** is [ʀ].
rr This is the voiceless counterpart of **r**, and it also does not occur in English. Examples are **airraq** 'string story' and **amarru** 'carry it on your back!'. Phonetically **rr** is [X].
uḡ This is a voiced fricative made with the tongue in the position for **g** but with the lips rounded.⁸¹ It occurs mainly in certain demonstrative pronouns and words derived from them. Examples are **aḡna** 'the one going' and **taḡaam** 'however'. Phonetically **uḡ** is [ɣ^w].
w For most of Central Yup'ik this is the voiceless counterpart of **uḡ**, that is, it is a voiceless labialized front velar that sounds like English *wh* in 'which' (for those English speakers for whom 'which' and 'witch' sound different).⁸² Examples are **wii**, **wiinga** 'I, me', and **wani** 'right here'. Phonetically **w** is [x^w].
uṛ This is the labialized counterpart of **r** and occurs only in some words containing the postbase **-uṛluq** 'poor dear one'. Examples are **cauṛluq** 'poor dear thing' and **mingquteuṛluni** 'his poor dear needle (compare **tuntuturluni** 'eating caribou')'. Phonetically **uṛ** is [ʀ^w].
uṛr This sound, the labialized counterpart of **rr**, is quite rare, occurring only in words such as **yaquṛrani** 'on its wing', also pronounced **yaquani** without **uṛr**. Phonetically **uṛr** is [X^w].

Note that some Yup'ik books omit the ligature entirely, thus not differentiating between, for example, **uḡ** and **ug**, but therein posing little or no difficulty for readers who know the language.

A handful of words borrowed from Inupiaq (or English) and used only in the Yup'ik area adjoining Inupiaq territory have a retroflex, Inupiaq-type 'r', written here **R**, which sounds somewhat like the *r* or *s* in the English word 'measure.'

⁸⁰ For information on the distribution **y** and **z** in General Central Yup'ik, see pp. 318–319 of *Yup'ik Eskimo Grammar*; for the distribution in other Yup'ik dialects, see below.

⁸¹ A few words in certain dialects start with **uḡ**, and at the beginning of a word **uḡ** sounds like English *w*. Examples are **uḡasek** 'arctic hare' and **uḡasqituq** 'he slipped'. Note that some people feel uncomfortable with this spelling and prefer to write **uayaratuli** for **uḡayaratuli** 'plunderer', though the first spelling would make the rhythmic length pattern (see below) incorrect. When it occurs immediately before or after a stop consonant, **uḡ** is voiceless, for example **aḡkut** 'the ones leaving', which could also be spelled **awkut**.

⁸² When not next to a stop consonant, in the Hooper Bay-Chevak dialect and the Norton Sound dialect and the villages of Tununak and Newtok **w** is a voiced labialized front velar fricative [ɣ^w] or [w], as observed above.

Nasals

Nasals are produced by the passage of air through the nose. Like fricatives, nasals are continuants. Yup'ik has voiceless as well as voiced nasals.

- m** Yup'ik **m** is like English *m*. An example is **maani** 'here'.
- m̃** This is the voiceless counterpart of **m**, made with the mouth in the position for **m** but with the vocal cords not vibrating while the air is being blown out through the nose. An example is **anm̃ia** 'he also put it outside'.
Phonetically [m̥].
- n** Yup'ik **n** is like English *n*. An example is **nuna** 'land'.
- ñ** This is the voiceless counterpart of **n**. An example is **qayamteñi** 'in our kayak'. Phonetically [n̥].
- ng** Yup'ik **ng** is like the English *ng* in 'singer' (for those English speakers for whom the *ng* in 'singer' sounds different from the *ng* in 'finger'). An example is **angun** 'man'.
- ng̃** This is the voiceless counterpart of **ng**. An example is **qimugteñguuq** 'it is a dog'. Phonetically [ŋ̥].

Some writers use **m**, **n**, and **ng** with lines over them instead of **m̃**, **ñ**, and **ng̃**, and some books omit any marks distinguishing voiceless from voiced nasals, but therein posing little or no difficulty for readers who know the language.

Vowels

Yup'ik *full* vowels (that is, **a**, **i**, and **u**, but not **e**) may occur either long (written double) or short (written single).⁸³ In addition, two unlike full vowels may form a vowel cluster.

- a** Yup'ik **a** is much like the English *a* in 'what'. Examples are **ata** 'look here' and **aata** 'father'.
- u** Yup'ik **u** is like English *u* in 'Luke'. Examples are **yuk** 'one person' and **yuuk** 'two people'. Next to a back velar, Yup'ik **u** sounds somewhat like English *o* in 'cork', for example **uquq** 'oil'. **u** may be devoiced when it occurs between **q** and **rr**, or between **k** and **gg**; as in **nasqurra** 'his head' and **atkugga** 'his parka'.
- i** Yup'ik **i** has a sound midway between English *i* in 'hit' and English *e* in 'he'. Examples are **imna** 'the aforementioned' and **iinruq** 'medicine'. Next to a back velar, **i** more closely approximates the sound of English *i* in 'hit'. Compare the *i*'s in **iqmik** 'chewing tobacco'.
- e** The vowel **e** in Yup'ik is like the *e* in the English word 'roses'. At the beginning of Yup'ik words, **e** is often silent or nearly so. Examples are **erenret** 'days' and **epulek** 'one with a handle'. Between voiceless consonants, **e** is often voiceless, as in **tekeq** 'index finger' and **keggestellregket** 'the two that bit them'. Phonetically **e** varies between [ə] and [i].

Automatic Devoicing

⁸³ However, a "rhythmically lengthened" single vowel is just as long as a double vowel in the same position, the difference between the underlying lengths of the two being manifest in its effect on the preceding consonant (see the explanation of rhythmic length and automatic gemination below). See also the section below on Yup'ik dialects for effects of "vowel compression," which shortens a double vowel in some dialects.

A fricative written single or a nasal written without the accent mark will be voiceless in certain environments.

1) An **s** at the beginning of a word and any fricative at the end of a word are voiceless, for example **sugtuuq** ‘he is tall’ and **qayacuar** ‘little kayak’.⁸⁴

2) A fricative next to a stop or that follows a voiceless fricative is also voiceless. For example, the **l** is voiceless in **puqla** ‘warmth’, **elpet** ‘you’, and **neqerrluk** ‘dried fish’.

3) A nasal that follows a stop or a voiceless fricative is voiceless; for example, the **ng** is voiceless in **angutnguug** ‘it is a man’ and **allngik** ‘patch on a boot sole’. However, a nasal that precedes a stop or a voiceless fricative is voiced; for example, the **ng** is voiced in **tengtaa** ‘it blew it away’ and **tenglluku** ‘blowing it away’.

Marked Gemination

If a consonant is followed by an apostrophe and then a vowel, then that consonant is *geminated*. This means that the preceding syllable ends with that consonant and the following syllable begins with the same consonant, so that it sounds as if it is being held briefly before being released, as is the case with the *k* sound in the English word ‘bookkeeper’. Yup’ik examples are **taq’uq** ‘he quit’ (compare **taquq** ‘braid’) and **muluk’uuq** ‘milk’. These apostrophes are counted phonetically as consonants, since the apostrophe indicates a doubling of the consonant it follows. (Other uses of the apostrophe are discussed later.)

Syllabification

Yup’ik syllables are of the following types (where V represents a vowel and C represents a consonant): CV, CVV, CVC, CVVC, and, at the beginning of a word, also V, VV, VC, and VVC. A syllable is *open* if it ends in a vowel (CV, CVV, V, VV) and *closed* if it ends in a consonant (CVC, CVVC, VC, VVC). A syllable is *light* if it contains one vowel (CV, CVC, V, VC) and *heavy* if it contains two vowels (CVV, CVVC, VV, VVC).

For example, the word **mit’eqataryaaqellruuq** ‘it was about to alight (but didn’t)’, is divided into syllables: **mit’/e/qa/tar/yaa/qell/ruuq**. The first syllable, **mit**, is closed and light; **e** and **qa** are open and light; **tar** is closed and light; **yaa** is open and heavy; **qell** is closed and light; and **ruuq** is closed and heavy.

Stress and Related Features of Pronunciation

Stress is a very prominent feature of Yup’ik pronunciation. It is determined by the pattern of light and heavy, closed, and open syllables in a word.

Primary Stress (Inherent and Rhythmic Stress)

Initial closed syllables (except for *stress-repelling bases*, discussed below) and heavy syllables have *inherent stress*.

Rhythmic stress, on the other hand, falls on every syllable following an unstressed syllable (subject to the rule of *stress retraction* described below). For example, in the word **nan/var/pag/teng/naq/ngai/cug/nar/quq** ‘he probably won’t try to go to the big lake’, the syllable **nan** has inherent stress because it is initial and closed, and **ngai** has inherent stress because it is heavy. Following these two inherently stressed syllables are unstressed syllables **var** and **cug**, and following these are rhythmically stressed **pag**, **naq**, and **nar**. Using ‘ to represent stress, we can display this thus: **nán/var/pág/teng/náq/ngái/cug/nár/quq**.

Stress Retraction

⁸⁴ For some writers and books this applies to all initial fricatives, not just **s**. For those writers, **luuskaa**q ‘spoon’, would imply voiceless initial **l**, so they would write ‘**luuskaa**q with the apostrophe used to show that **l** is not “truly” initial and hence is voiced.

This principle is followed by all of Central Yup'ik except for the Norton Sound dialects: If the syllable on which rhythmic stress is due to fall is open, is nonfinal, and follows a closed syllable, then stress is retracted to the preceding syllable. For example, in the word **ang/yar/pa/li/ciq/sug/nar/quq** 'he probably will make a big boat', after the syllable **ang**, which has inherent stress, rhythmic stress is due to fall on **pa**, but since this is an open syllable following the closed syllable **yar**, stress is retracted to the syllable **yar**. Rhythmic stress next falls on **li**, and after that on **sug**: **áng/yár/pa/li/ciq/súg/nar/quq** (but in Norton Sound, where stress retraction does not apply: **áng/yar/pá/li/cíq/sug/nár/quq**).

Loss of Stress in Final Syllables

A final syllable loses its stress. For example, in **angyaqa** 'my boat' and in **angyaqaa** 'it is his boat', the final syllables **qa** and **qaa** lose their stress.

Rhythmic Length

A prime vowel of a stressed open light syllable will be lengthened in pronunciation. This is called *rhythmic lengthening*. In the above example, **angyarpaliciqsugnarquq**, the **i** of the open stressed syllable **li** is rhythmically lengthened. The vowels in the syllables **ang** and **sug** are not lengthened because even though these syllables are stressed and light, they are closed rather than open; thus, using the "Phonology and Orthography" section of this introduction to indicate rhythmic length, **áng/yár/pa/li/ciq/súg/nar/quq**.

Automatic Gemination

There are two circumstances in which a consonant will be pronounced geminated though not followed by an apostrophe in the spelling.

1) The initial consonant of a heavy syllable that follows an unstressed open light syllable will be automatically geminated. For example, the **c** in **angyacuar** 'little boat' is geminated, but not the **c** in **qayacuar** 'little kayak', nor in **qaicuar** 'little wave', because in the second and third examples the syllable preceding **c** is stressed.

2) The consonant following a stressed **e** in an open syllable is automatically geminated. For example, the second **m** in **tumemi** 'on the trail' is geminated, as is the **rr** in **nipteqerru** 'turn it off, please'.

Automatic gemination serves to distinguish a heavy vowel from a rhythmically lengthened light vowel; for example, in **ataata** 'paternal uncle' the first **t** is automatically geminated, while in **atata** 'later on' the middle **a** is rhythmically lengthened and sounds just as long as **aa**, but the **t** preceding it is not geminated.

Secondary Stress

A syllable preceding a heavy syllable receives *secondary stress*; thus in **nerciqsugnarqaa** 'he will probably eat it', the syllable **ner** has inherent stress, **sug** has rhythmic stress, and **nar** has secondary stress: **nér/ciq/súg/nár/qaa**. Note that secondary stress is phonetically identical with primary stress, but in rule ordering is assigned at a later stage.

Stress-Repelling Bases

The semantically empty bases **ca-** 'what, something, to do something', **pi-** 'thing, to do', and **ki-** 'who' do not have inherent stress even when they are in closed (initial) syllables. Thus in **pin/qíg/teng/náq/sug/nár/quq** 'he is probably trying again', the first syllable does not have inherent stress; instead, rhythmic stress starts on the second syllable (compare **mén/qig/téng/naq/súg/nar/quq** 'he is probably drinking water again'). These stress-repelling bases *can* have retracted stress and secondary stress, and they will have inherent stress if they are part of lexicalized bases. An example of the latter situation is the Kuskokwim and Bristol Bay base **cange-** 'to catch fish or game',

which is derived from **ca-** ‘what, something, to do something’ and **-nge-** ‘to acquire’, but which gets inherent stress, as in **cáng/yug/tuq** ‘he wants to catch fish or game’, in contrast with the non-lexicalized combination of **ca-** and **-nge-**, which does not get inherent stress, as in **cang/yúg/tuq** ‘he wants to acquire something’. The standard Yup’ik orthography does not have a mechanism for indicating that a closed initial syllable is unstressed. Thus, the standard orthography underdifferentiates in some cases with regard to these three bases. The almost obsolete base **ete-** ‘to be’ is also stress-repelling (see its listing in the Bases section).⁸⁵

The Apostrophe

The apostrophe serves several functions in Yup’ik, depending on the letters around it.

1) After a consonant and before a vowel (C’V), the apostrophe indicates gemination, as previously mentioned.

2) After a vowel and before the consonant **r** (V’r), the apostrophe indicates that the syllable in which it occurs and the preceding syllable as well are both to be stressed, when without the apostrophe this would not be so. For example, **melugtu’rtuq**, i.e., **me/lúg/tú’r/tuq** ‘he keeps smoking or sucking’ (compare **melugturtuq**, i.e., **me/lúg/tur/tuq** ‘he is eating fish eggs’); and **neryartu’rtuq**, i.e., **nér/yár/tú’r/tuq** ‘he keeps eating berries as he picks them’ (compare **neryarturtuq**, i.e., **nér/yar/túr/tuq** ‘he is going somewhere to eat’).⁸⁶

3) Between two vowels (V’V), the apostrophe blocks gemination of a preceding consonant. For example, in **atu’urkaq** ‘garment’ the **t** is not geminated, and in **apa’urluq** ‘grandfather’, the **p** is not geminated. The apostrophe has the same effect as if it were a consonant. (It is not, however, a glottal stop.)

4) Between two consonants (C’C), the apostrophe either (a) prevents the separate sounds of **n** and **g** from being read as the single sound **ng**, as in **can’get** ‘grass’ (compare **cangacit** ‘how are you?’), or (b) prevents automatic devoicing as in **it’gaq** ‘foot’ where the **g** is voiced (compare **nutga** ‘his gun’), and **tek’ni** ‘his own index finger’, where the **n** is voiced (compare **cakneq** ‘very much’).

5) At the end of a word the apostrophe indicates that the word is a shortened form; for example, **qaill’** is a shortened form of **qaillun** ‘how’.

6) See the section on Yup’ik dialects, below, for special uses of the apostrophe in particular dialects.

7) In some Yup’ik books, though not this dictionary, an apostrophe is used before a voiced initial fricative.⁸⁷ Thus one will see **’gilertuq** where we would have **gilertuq** ‘he is moving, traveling’.

Note that uses 2 and 3 are necessitated by perturbations in the rhythmic stress system caused by **ar**-deletion (see the Grammar section).

The Hyphen

The hyphen serves four functions in Yup’ik.

1) It separates elements of a word that are not in the Yup’ik orthography (i.e., English borrowings spelled in the English way) from the Yup’ik suffixes attached to them, as in **college-arluni** ‘going to college’.

2) It separates *enclitics*⁸⁸ at the end of a word from the main body of the word and from each other. An example is **nuna-llu-qaq?** ‘and the land?’.

3) It indicates an overlong vowel in the words **aa-ang** and **ii-i**, both meaning ‘yes’.

4) As in English, it is used at a syllable boundary for word division at the end of a line of writing.

⁸⁵ Concerning the issue of stress-repelling bases, see Jacobson 1984b.

⁸⁶ See *Practical Grammar of ... Yup’ik*, pp.187–189 concerning this issue and the optionality of the apostrophe.

⁸⁷ See footnote 8 above.

⁸⁸ See *Practical Grammar of ... Yup’ik*, p. 12.

Comparison of Modern and Older Orthographies

The modern orthography as used in this book differs in a number of ways from the older orthographies developed by, or under the influence of, Moravian and Catholic missionaries. The following chart of correspondences indicates the main differences.

<i>Modern Orthography</i>	<i>Older Orthographies</i>
c	ch, ts, tsh
q	Ƙ, k (<i>distinguished from front k, if at all, by choice of symbol for preceding vowel</i> <i>[see below]</i>)
w	wh
vv	f
ll	tl, ł, l̥
ng	ng, ñ
u	u , or o <i>when preceding a back velar</i>
i	i , or e <i>especially when preceding a back velar</i>
e	i , or <i>no vowel written at all</i>
<i>vowel length</i>	<i>not indicated, or indicated by ^ over the vowel, whether length is rhythmic or otherwise</i>
<i>consonant germination</i>	<i>not indicated, or indicated by doubling the consonant in question, or by ' on the preceding vowel, whether germination is automatic or otherwise</i>

PUBLISHED SOURCES OF QUOTED EXAMPLES

Books, booklets, and compact discs (those without comment are school booklets, only in Yup'ik)

AGA 1996 — *Agayuliyararput* (Fienup-Riordan ed. 1996) [elders from Yukon, Kuskokwim, Nelson Island, and Nunivak talk about dances and masks, and they tell traditional stories and person narratives; transcribed and translated by Marie Meade]

ANG 1977 — *Angalgaam Qanemcicuaraak* (Afcan 1977a)

BES n.d. — *Best Beginnings, Alaska's Early Childhood Investment* (State of Alaska)

CAL 1981 — *Caliarkat Qaneryamek Elicalriani* (Paukan 1981a)

CAM 1983 — *Cama-i Book* (Vick 1983) [includes one traditional story in Yupik with translation by John Wassillie Sr. from the Kuskokwim]

CAT 1950 — *Catholic Manual of Prayers in Innuvit* (Lonneux 1950) [lower Yukon or Norton Sound (Kotlik) dialect; published in an old orthography, unpublished manuscript transliteration by Walkie Charles used here]

CAU 1985 — *Cauyarnariuq* (Mather 1985) [elders from the Yup'ik entire area north of Bristol Bay talk about old time celebration and beliefs; no English translated]

CET 1971 — *Cetugpak* (Blanchett 1971) [traditional story from the Kuskokwim, included in PRA 1995]

CEV 1984 — *Cev'armiut Qulirait Qanemciit-llu* (Woodbury ed. 1984) [Chevak traditional stories and person

- narratives]
- CIK 1972 — *Cikemyaq* (Afcan 1972)
- CIU 1977 — *Ciutiim Qavangua* (Nicori 1977)
- CIU 2005 — *Ciuliamta Akluit* (Fienup-Riordan ed. 2005b) [elders from Yukon, Kuskokwim, Nelson Is., and Bristol Bay talk about museum objects and the cultural practices associated with them, also tell traditional stories; transcribed and translated by Marie Meade]
- CUN 2007 — *Cungauyaraam Qulirai* (Blue 2007) [Annie Blue of Bristol Bay and the Kuskokwim tells traditional stories; transcribed and translated by Eliza Orr, Ben Orr, and others]
- EGA 1973 — *Egacuayit Kenurrait Tanqit* (Afcan 1973)
- ELD 1984 — *Elders' Conference* (Alexie and Morris eds. 1984) [with translation]
- ELL 1997 — *Ellangellemni* (Orr, Orr, et al. 1997) [Nelson Is. elders tell traditional stories]
- ELN 1990 — *Elnguq* (Jacobson, A. 1990) [novel about Yup'ik life in the mid-1900s; written in Kuskokwim Yup'ik; translation published separately (2008)]
- ESK 1899 — *The Eskimo about Bering Strait* (Nelson 1899) [includes one traditional story from Norton Sound in Yup'ik in the author's own orthography; transliteration from unpublished manuscript by Irene Reed used here]
- GET n.d. — *Get the Most Out of Your Weatherized Home* (State of Alaska, Department of Community & Regional Affairs n.d.) [translation, in Kuskokwim dialect, of separately published English pamphlet]
- GRA 1901 — *Grammatical Fundamentals of the Innuit Language* (Barnum 1901) [has half a dozen traditional stories from Nelson Is. and north along the coast; all with notes, one with literal translation; published in author's own orthography; transliteration from unpublished manuscript by Martha Teeluk used here]
- GRA 1951 — *Graded Catechism in Innuit* (Lonneux 1951) [published in an old orthography of Yup'ik; transliterated as needed here by dictionary compiler]
- JOE 2008 — *Joe Paul's Yup'ik Songs and Stories* (Alaska Native Language Center 2008) [compact disc of original songs, translated hymns and traditional stories with pamphlet transcribed and translated by Anna Jacobson]
- KAI 1977 — *Kainiqellriit* (Samson 1977)
- KAP 1998 — *Kapuckaryaraq* (White 1998)
- KAV 1972 — *Kaviaren Kavirilra* (Teeluk 1972) [traditional story from the Yukon, included in PRA 1995]
- KIP 1998 — *Kipnirmiut Tiganrita Igmirtitlrit, Qipnermiut Tegganrita Egmirtellrit* (Fredson et al. 1998) [elders from Kipnuk (Canineq dialect) give personal accounts; various transcribers; no English translation]
- KUP 1977 — *Kupcaar Yugpak-llu* (Manutoli 1977a)
- KUU 1971 — *Kuul'tilakessaaq Pingayun-llu Taqukaat* (Afcan 1971a) [Kuskokwim dialect]
- KUU 1977 — *Kuul'tilaksaq Pingayun-llu Taqukat* (Afcan 1977b) [Yukon dialect]
- LIT 1972 — *Liturgy and Hymns in the Yup'ik Eskimo Language* (Eskimo Language Workshop 1972) [transliteration of Moravian prayer book into the modern standard orthography by Joseph Albrite and Calvin Coolidge of YUA 1945 (see below) with a few substantive revisions]
- MAC 1977 — *Macaaskaarrluk Negair-llu* (Gauthier 1977)
- MAN 1977 — *Management of Change* (Alaska Native Foundation 1977) [translation by Anna Jacobson of English original]
- MAQ n.d. — *Maqaruaq, Tan'gerliq Usvituli-llu Iggiayuli* (Lupie n.d.)
- MAR1 2001 — *Martha Teeluk-aam Qulirat Avullri Erinairissuutekun Agnes Hootch-aamek* (Jacobson, A. 2001a) [traditional stories told by a Norton Sound (Kotlik) speaker; recorded in the 1960s; no English translation]

- MAR2 2001 — *Martha Teeluk-aam Qulirat Avullri Erinairissuutekun Ukunek Yugnek Evon Benedict, Charlie Hootch, Anna Lee, Matilda Oscar, Isaac Tuntusuk-llu* (Jacobson, A. 2001b) [traditional stories told by Norton Sound (Kotlik), Lower Yukon, and Kuskokwim speakers; recorded in the 1960s; no English translation]
- MIK 2006 — *Mikelnguut Yuarutait Yugcetun* (Alaska Native Language Center 2006) [compact disc of originally Euro-American children's songs with booklet of transcriptions and translations]
- NAA 1970 — *Naaqsugenarqelriit vol. 1; no. 3* (Eskimo Language Workshop 1970) [journal issue; earlier form of modern standard orthography with English translation]
- NAA 1971 — *Naaqsugenarqelriit vol. 1; no. 4* (Eskimo Language Workshop 1971) [journal issue; earlier form of modern standard orthography with English translation]
- NAT 2001 — *Native American Oral Traditions — Collaboration and Interpretation* (Mather and Morrow 2001) [traditional story from Kuskokwim with English translation]
- NEK 1981 — *Nek'a* (Paukan 1981b) [Lake Iliamna children's booklet]
- NEL 1978 — *Nelget Cali-llu Ekem Arenqiallucugyailkutiitnek* (State of Alaska, Division of Insurance, Department of Commerce, and Economic Development 1978) [translation by Anna Jacobson of separately published English pamphlet]
- NUK 1977 — *Nukalpiaq Ayatuli* (Ivon 1977)
- ORT 2006 — *Orthodox Choir's Handbook* (Nicolai, Martin 2006) [Yup'ik, English, and transliterated church Slavonic]
- PAI 2008 — *Paitarkiutenka* (Andrew 2008) [elder Frank Andrew (Canineq dialect) talks about kayak building and other aspects of hunting and trapping; transcribed, translated, and edited by Alice Rearden, Marie Meade, and Ann Fienup-Riordan]
- PEK 1977 — *Peksut Piyagaat* (Afcan 1977c)
- PRA 1995 — *Practical Grammar of the Central Alaskan Yup'ik Eskimo Language* (Jacobson, S. 1995) [contains a number of model conversations and other Yup'ik readings written by Anna Jacobson, and several traditional stories and children's stories by others; the readings and stories are without English translations; for quotations from pages 396, 460, 461, and 462 one should see the second, corrected printing dated 1997 or beyond and indicated here as PRA 1995*]
- PUP 1977 — *Pupitukaar* (Manutoli 1977)
- QAI 1984 — *Qaillun Issaluum Saskungellra* (John 1984) [story by Evon John from Bristol Bay; includes English translation]
- QAN 1995 — *Qanemcikarluni Tekitnarqelartuq* (Orr and Orr 1995) [Nelson Is. elders tell traditional stories, with translation]
- QAN 2009 — *Qanruyutet linruugut* (Rearden and Jacobson, A. 2009) [elders talk about Yup'ik child-rearing precepts, traditional abstinence practices, etc.; Yup'ik with English translations]
- QAS 1977 — *Qasrulek, Qasrulek* (Tunuchuk 1997)
- QES 1973 — *Qessanquq Avelnqaq* (Mather 1973)
- QUA n.d. — *Quarruuk* (Berlin and Alexie n.d.)
- QUL 2003 — *Qulirat Qanemcit-llu Kinguvarcimalriit* (Fienup-Riordan ed. 2003) [elder Paul John from Nelson Is. talks about various aspects of Yup'ik culture, directing his talk toward young adults; transcribed and translated by Sophie Shield]
- SBO 1896 — *Sbornik Tserkovnykh Pesnopeniy i Molitvocloviy na Aglegmyutsko-Kuskokvimskom Narechiiy* (n.a. 1896) [Russian Orthodox prayer book written in Aglurmiut-Kuskokwim dialect by Netsvetov, Bel'kov, and Orlov; in

- Cyrillic orthography for Yup'ik; transliteration here as needed by dictionary compiler]
- SOC 1946 — *Social Culture of the Nunivak Eskimo* (Lantis 1946) [includes four traditional stories written in an imprecise orthography; transliterated into the modern orthography by Lars Kristofferson 1982]
- TAP 2004 — *Taprarmiuni Kassiyulriit* (Bogeyaktuk and Steve 2004) [discussion of Stebbins dance festival for Anatole Bogeyaktuk and Charlie Steve (mixed lower Yukon and Nelson Is. dialect), Stebbins elders; transcribed, translated, and edited by Sophie Shield, Marie Meade, and Ann Fienup-Riordan]
- TAQ 1977 — *Taqukaq Qanganaq-llu* (Breiby 1977) [Bristol Bay children's booklet]
- TUK 1974 — *Tukutukuarall'er* (Joe 1974)
- UQU 1971 — *Uqumyak* (Afcan 1971c)
- UUT 1974 — *Uuteka'aq Mecaq'amek At'lek* (Blanchett 1974) [Yukon dialect version by Pascal Afcan]
- WHE 2000 — *Where the Echo Began* (Fienup-Riordan ed. 2000) [includes one traditional Nunivak story by Robert Kolerak transcribed and translated by Marie Meade]
- WOR 2007 — *Words of the Real People* (Fienup-Riordan and Kaplan eds. 2007) [includes several traditional stories with translation from Nunivak Is. and translated and edited by Howard Amos and Robert Drozda]
- YUA 1945 — *Yuarutit* (Moravian Church 1945) [Moravian prayer book, a revised and expanded version of the 1928 book; in an old orthography by Ferdinand Drebert (and others); transliterated with some changes in wording as LIT 1972]
- YUP 1996 — *Yup'ik Phrase and Conversation Lessons* (Jacobson, A. 1996) [booklet contains model Yup'ik phrases and conversations with translations; includes compact disc of the Yup'ik only]
- YUP 2005 — *Yupiit Qanruyutait / Yup'ik Words of Wisdom* (Fienup-Riordan ed. 2005a) [panel discussion by Yup'ik elders from Nelson Is., Canineq, and Kuskokwim about Yup'ik traditions and rules of interpersonal behavior; transcribed and translated by Alice Rearden and Marie Meade]
- YUU 1995 — *Yuut Qanemciit* (Tennant and Bitar eds. 1995 [1981]) [traditional Yup'ik stories, personal narratives, and short topics, by various elders from Kuskokwim, Yukon, Nelson Is., and Canineq; various transcribers and translators; page references here are to the more readily available 1995 edition]

Unpublished (transcriptions, translations, and some audio in the Alaska Native Language Archives at the University of Alaska Fairbanks; transcriptions (only) are also included in Appendix 11.)

- UNP1 — *Anuurluqellriik* [Norton Sound (Kotlik) traditional story (about a boy who, having magically eaten too much, couldn't fit through the door but could fit through the eye of his grandmother's needle) told by Martha Teeluk]
- UNP2 — *Mequpayagaq* [upper Kuskokwim story (about an older unmarried woman who married a stranger and regretted it; the storyteller's dog frames the story) told by Charles Foggy of Sleetmiut]
- UNP3 — *Akerta Iraluq-llu* [Norton Sound (Kotlik) traditional widespread Eskimo story (about the origin of the sun and the moon) told by Martha Teeluk]

From Websites

- WEB1 — Chevak website [traditional story by Joe Friday, transcribed by Rebecca Kelly; no translation]
- WEB2 — Mekoryuk website [traditional Nunivak story by several elders; translation included]

Isaiah — (American Bible Society 2007) [abbreviated as ISAI.; see *Pentateuch-at* . . . below for translation and publication information]

Jonah — (American Bible Society 2007) [abbreviated as JONA.; see *Pentateuch-at* . . . below for translation and publication information]

Kaneriarakgtar — (American Bible Society, 1956) [the New Testament translated and published in part in the early 1900s, revised and published in an old orthography in full 1956 (Ferdinand Drebert and other translators (unknown)); books of the New Testament listed by English name (Matthew abbreviated to MATT.; Romans to ROMA. 1st Corinthians to 1CORI.; Revelations to REVI.); transliteration of the first three Gospels to the modern standard orthography by Sophie Shield]

Pentateuch-at Psalm-at Proverbs-aat — (American Bible Association 2005) [large part of the Old Testament published translated and published in the modern standard orthography (translated by Peter Andrew, Teddy Brink, Elsie Mather, Elizabeth Howard, and others); books of the Old Testament listed by the names given in this publication: AYAG. — Genesis (Ayagniqarraaq), ANUC. — Exodus (Anucimallrat), LEVI. — Levites (Levite-artaat), NAAQ. — Numbers (Naaqumallrat), ALER. — Deuteronomy (Alerquutet), PSALM — Psalms (Psalm-at), and AYUQ. — Proverbs (Ayuqucirtuutet); note that Genesis was published alone earlier as *Ayagniqarraami* (ABS 1996) and that minor changes have been made in it.]

amikuk a certain type of legendary creature #
 E. W. Nelson (ESK 1899:442) states, "The *a-mi'-kuk* is said to be a large, slimy, leathery-skin sea animal with four long arms; it is very fierce and seizes a hunter in his *kaiak* at sea, dragging both under the water. When it pursues a man it is useless for him to try to escape, for if he gets upon the ice the beast will swim below and burst up under his feet; should he reach the shore the creature will swim through the earth in pursuit as easily as through the water. . . . The idea of this creature may have had its origin in the octopus."; Balassia W. Nicolai of Kwethluk (*p.c.*) described an *amikuk* as being like an otter but without fur, impossible to capture, and said that when shot it multiplies into eight (note that in Sugpiaq (and in adjoining EG in Yup'ik), and in Greenland, *amikuq* is "octopus"); Joseph Evan of Napaskiak stated (AGA 1996:143 *translation only given here*), "It is said that some people hear *amikuk* out in the wilderness as they move about in the spring. It's hard to tell where the sound is coming from. And though it sounds like it's coming from the land, there's nothing there. It isn't visible. When a person hears the sound it would get louder and louder. He would keep hearing the sound. They say when the creature swims around in the earth near the person, the ground he is walking on becomes like quicksand. And if a person is holding a walking stick when an *amikuk* comes, he begins to feel very different. He becomes weak. They say this happens when the creature begins entering inside him and begins to swim in his body."; < PE amik(k)ur

kuyungtur- to knock # LI; (?)

In the NUN and EG dialects the w, as in wani 'right here', wiinga 'I, me', wangkuta 'we, us', watua 'now', etc. is realized as a stop [kʷ] (rather than a voiced or voiceless fricative), and some people prefer to write this as kw; thus: kwani, kwiinga, kwangkuta, kwatua, for those dialects.

L

For words that sound as if they start with l, look also under el.

Some Yup'ik writers modify the orthography used in this dictionary by considering any word-initial fricative to be pronounced voiceless (in this book, only s is treated this way). Consequently, to write a word that begins with a voiced l, those writers use an apostrophe before the initial l of such a word. Thus, for such writers, the words of the following l section would all be written with initial apostrophe, for example 'luuskaa' rather than luuskaa' 'spoon'.

paacaq barge # *Paacamek* maavet tekiteqarraalriamek tangellruunga qakmaken Kuigpagmek tailuni. 'I saw a *barge* when it first arrived coming here from the north, from the Yukon.' (KIP 1998:280); *from English* 'barge'

paalaryaag- to hurriedly go forward # NS

paalraayak a certain legendary creature # *Paalraayit-gguq* tamakut nuna itumlluku pituut, ungilluku nuna. Teggellriartairulluni ciunrat, nuna itumluni unairulluni. 'It was said that "*paalraayit*" were able to move around underground. They were able to go right through the ground easily, softening the hard ground.' (CIU 2005:78); E. W. Nelson (ESK 1899:444) states: "A strange, crocodile-like animal, known as *pal-rai-yuk*, is painted on the sides of umiaks and on the inside of wooden dishes by natives along lower Yukon and Kuskwim rivers. According to the traditions of the people in this district the climate in ancient times was very much warmer than at present and the winters were shorter. In those days the mythic animals referred to were abundant in the swampy country between the two rivers. . . . At that time the *pal-rai-yuk* lived in lakes, creeks, and marshes, where it killed men and animals for food. . . . The curious likeness of these animals to the alligator, as shown in the accounts of its habits and in drawings representing it, is very remarkable."

paallag- to fall forward # *of persons*; paallagtuq 'he fell forward' / aqvaqurtuq paallaka'aqluni 'he is running, falling forward now and then'; Imna iilek ataucirrarmek, manumini uitaualria, enuuqerrluku *paallagcetliniluku*.
